Syllabus

Descrizione corso

Titolo insegnamento	Didattica della matematica e delle scienze naturali 1 - Fondamenti
Codice insegnamento	12410
Titolo aggiuntivo	
Settore Scientifico-Disciplinare	NN
Lingua	Tedesco
Corso di Studio	Corso di laurea magistrale a ciclo unico in Scienze della Formazione primaria - sezione in lingua tedesca
Altri Corsi di Studio (mutuati)	
Docenti	prof. dr. Camilla Wellstein, Camilla.Wellstein@unibz.it https://www.unibz.it/en/faculties/agricultural-environmental-food-sciences/academic-staff/person/33786 prof. dr. Michael Gaidoschik, Michael.Gaidoschik@unibz.it https://www.unibz.it/en/faculties/education/academic-staff/person/37288 Verena Stragenegg, Verena.Stragenegg@unibz.it https://www.unibz.it/en/faculties/education/academic-staff/person/38380 dr. Franziska Zemmer, Franziska.Zemmer@unibz.it https://www.unibz.it/en/faculties/education/academic-staff/person/39588 Prof. Dr.Dr. Robert Philipp Wagensommer, RobertPhilipp.Wagensommer@unibz.it https://www.unibz.it/en/faculties/education/academic-staff/person/40174 Dott. mag. Irene Köfele, Irene.Koefele@unibz.it https://www.unibz.it/en/faculties/education/academic-

	staff/person/47254 Dott. mag. Sonia Pichler, Sonia.Pichler@unibz.it https://www.unibz.it/en/faculties/education/academic-staff/person/48873 Dott. mag. Vera Knapp, Vera.Knapp@unibz.it https://www.unibz.it/en/faculties/education/academic-staff/person/36686
Assistente	
Semestre	Secondo semestre
Anno/i di corso	2.
CFU	11
Ore didattica frontale	70
Ore di laboratorio	50
Ore di studio individuale	155
Ore di ricevimento previste	33
Sintesi contenuti	Knowledge - the subject-specific and subject-didactic principles, in particular the subject-immanent structures and cross-age developmental lines that must be observed in order to be able to stimulate, accompany and promote children's learning processes in mathematics (in the content area of number/arithmetic) as well as chemistry and biology from kindergarten to the transition to secondary school as seamlessly as possible, both in a child-orientated and subject-specific manner and in accordance with the children's potential
Argomenti dell'insegnamento	See the individual course modules
Parole chiave	Didactics of arithmetic, didactics of biology, didactics of chemistry, early mathematical education, early science education
Prerequisiti	Willingness to engage with the subject matter of mathematics and natural sciences relevant to early learning in kindergarten and elementary school, even if one feels uncertain about these subjects and/or does not have fond memories of one's own school lessons in these subjects. Interest in children's thought processes and enjoyment when

	children make intellectual discoveries.
Insegnamenti propedeutici	
Modalità di insegnamento	Lectures and laboratories (see detailed explanations for individual modules)
Obbligo di frequenza	In accordance with the regulation
Obiettivi formativi specifici e risultati di apprendimento attesi	Skills - to recognise and use the potential of games and everyday situations in kindergarten for mathematical and scientific learning in the content areas addressed in the module - to observe, analyse, plan and design learning-promoting support for learning processes in kindergarten and school lessons in mathematics (content area number/arithmetic) as well as biology and chemistry (interdisciplinary also physics) based on the framework guidelines for kindergarten and primary school in South Tyrol, always with a view to the interdisciplinarity required in kindergarten and primary school - to promote general, process-related maths and science skills - for the qualitative, process-oriented assessment of competences/learning levels and for dealing with heterogeneity in a way that promotes learning in the content areas addressed in the module Expected learning outcomes and competences: Knowledge and understanding - Knowledge and understanding of the educational objectives of the framework guidelines for kindergarten and primary school related to the mathematical and scientific content areas covered, taking into account the general (process-related) mathematical and scientific competences throughout - Basic mathematical knowledge and fundamental insights into elementary mathematical structures and relationships in the content area "Number" (arithmetic); knowledge and understanding of current development models for the acquisition of arithmetic skills as well as current didactic concepts for promoting and further developing these skills - Knowledge and understanding of basic chemical-physical and biological concepts and their interdisciplinary connection; knowledge and understanding of basic relationships between

	animate and inanimate nature in the immediate living environment; knowledge and understanding of current concepts for the didactic implementation of the learning content addressed in the sense of moderate constructivism. Applying knowledge and understanding - Expertise in solving elementary mathematical tasks relevant to kindergarten and primary school in different ways and in justifying the mathematical correctness of such different solutions - Expertise in planning, implementing and evaluating qualitative, process-oriented learning assessments in the mathematical content areas covered - Expertise in identifying intuitive concepts and theories of children and pupils on scientific topics - Expertise in planning settings that promote learning in the mathematical and scientific content covered, taking into account heterogeneous learning requirements Judgement - Competence in the technically and didactically sound assessment of the potential of everyday and play situations for maths and science education in kindergarten as well as of tasks, exercise forms, learning environments, methods and didactic materials for the further development of maths and science skills in primary school in the content areas covered - Expertise in differentiated reflection on one's own and others' attitudes towards mathematics and science, their significance for learners, school and society, as well as attitudes towards learning mathematics and science Communication - Ability to present the content and contexts covered in a precise and target group-appropriate manner in both specialised and everyday language - Competence to present their own thought processes and solution strategies in an intersubjectively comprehensible way - Knowledge of the importance of language skills for learning arithmetic and science and of suitable forms of promoting these in kindergarten and primary school

	Learning strategies - (Further) development of cross-content and content-specific problem-solving strategies - (Further) development of the ability to independently learn and deepen subject-specific and didactic content
Obiettivi formativi specifici e risultati di apprendimento attesi (ulteriori info.)	
Modalità di esame	Comprehensive final written examination (3 hours total working time) on the content covered in the course. The written examination consists of one part each on the mathematical and scientific topics.
Criteri di valutazione	The content of the lectures in mathematics education and biology and chemistry education is assessed in a written examination. Performance in the laboratories is assessed on the basis of written assignments, which must be completed outside of laboratory sessions by the specified deadlines. Active participation in the laboratories is required. The performance assessment of the written examinations and work assignments takes into account the correctness of content and language, accuracy and clarity, in particular when applying the content taught in the course to the examination tasks (transfer performance); correct use of technical language; reference to specialist literature; depth and comprehensibility of the required reflection and argumentation. In order to successfully complete the course, all four sub-courses must be passed individually. If this condition is met, the overall assessment will take into account the performance in the sub-courses in proportion to the respective course's share of the total credit points for the course. In the event of a negative assessment of the course, any positively assessed partial examinations will be credited the next time the course is taken. Please note, however, that even in this case, a negative assessment will count toward the number of examination attempts. According to the examination regulations, failing the course three times will result in a three-term suspension from

	taking the examination.
Bibliografia obbligatoria	See the required reading listed for each module.
Bibliografia facoltativa	See the further reading listed for each module.
Altre informazioni	
Obiettivi di Sviluppo Sostenibile (SDGs)	Ridurre le disuguaglianze, Istruzione di qualità

Modulo del corso

Titolo della parte costituente del corso	Elementi di base della matematica per la sua didattica
Codice insegnamento	12410A
Settore Scientifico-Disciplinare	MATH-01/B
Lingua	Tedesco
Docenti	prof. dr. Michael Gaidoschik, Michael.Gaidoschik@unibz.it https://www.unibz.it/en/faculties/education/academic-staff/person/37288
Assistente	
Semestre	Secondo semestre
CFU	4
Docente responsabile	
Ore didattica frontale	40
Ore di laboratorio	0
Ore di studio individuale	60
Ore di ricevimento previste	12
Sintesi contenuti	The aim of the lecture is to impart the basic subject-related and didactic knowledge necessary to stimulate and support learning processes in the content area of number (arithmetic) from kindergarten to the end of primary school, with an orientation towards both the child and the subject, and to be able to promote the individual potential of the children.

Argomenti dell'insegnamento	- Mathematics as an activity of discovering, describing, creating and explaining patterns and structures - Development of maths-related interests, abilities and skills in early childhood - Concepts of early mathematical education in line with the framework guidelines for kindergarten in South Tyrol and current specialised didactics of mathematics - Subject-specific and subject-didactic basic knowledge for the learning-promoting treatment of the content area of number (arithmetic), upstream of classifying and sorting by characteristics and dealing with quantities, from kindergarten to the transition to secondary school (development of the concept of number; elements of number theory, number aspects; place value systems; addition, subtraction, multiplication, division), with continuous attention to the promotion of general, process-related mathematical skills (problem solving, communication, representation, argumentation and modelling) - The role of acting with material as well as of working with visualisations for the development of arithmetic operations and concepts - Substantive learning environments for the content that is covered in the lecture; natural differentiation to promote the learning of children of all levels of talent and inclination - Qualitative assessments and process-orientated learning progression on key content covered
Modalità di insegnamento	Lecture with media support, interspersed work phases (from individual work to small groups), repeated invitation to written interim reflections and differentiated feedback on the course
Bibliografia obbligatoria	Benz, Ch., Peter-Koop, A., & Grüßing, M. (2015). Frühe mathematische Bildung. Mathematiklernen der Drei- bis Achtjährigen. Springer. Gaidoschik, M. (2025). Das dezimale Stellenwertsystem verstehen, verinnerlichen, flexibel anwenden: Ein Leitfaden für den Unterricht in der Grundschule. Klett-Kallmeyer. Gaidoschik, M. (2022). Rechenschwäche verstehen – Kinder gezielt fördern. Ein Leitfaden für die Unterrichtspraxis (12.

	Auflage). Persen. Gaidoschik, M. (2019). Einmaleins verstehen, vernetzen, merken. Strategien gegen Lernschwierigkeiten (5. Auflage). Kallmeyer. Padberg, F. & Benz, Ch. (2020). Didaktik der Arithmetik. Springer.
Bibliografia facoltativa	Schipper, W., Dröge, A., & Ebeling, R. (2015-2018). Handbuch für den Mathematikunterricht, 1./2./3./4. Schuljahr. Bildungshaus Schulbuchverlage. Wittmann, E.Ch. & Müller, G. (2017/2018). Handbuch produktiver Rechenübungen. Neufassung. Kallmeyer.

Modulo del corso

Titolo della parte costituente del corso	Elementi di base della matematica per la sua didattica con particolare attenzione alla fascia di età (0)-2-7 (lab.)
Codice insegnamento	12410B
Settore Scientifico-Disciplinare	MATH-01/B
Lingua	Tedesco
Docenti	Dott. mag. Irene Köfele, Irene.Koefele@unibz.it https://www.unibz.it/en/faculties/education/academic-staff/person/47254 Dott. mag. Sonia Pichler, Sonia.Pichler@unibz.it https://www.unibz.it/en/faculties/education/academic-staff/person/48873 Dott. mag. Vera Knapp, Vera.Knapp@unibz.it https://www.unibz.it/en/faculties/education/academic-staff/person/36686 Verena Stragenegg,

	Verena.Stragenegg@unibz.it https://www.unibz.it/en/faculties/education/academic-staff/person/38380
Assistente	
Semestre	Secondo semestre
CFU	2
Docente responsabile	
Ore didattica frontale	0
Ore di laboratorio	30 Gruppe 1: Verena Stragenegg Gruppe 2: Dott. Mag. Irene Köfele Gruppe 3: Dott. Mag. Sonia Pichler Gruppe 4: Dott. Mag. Vera Knapp
Ore di studio individuale	20
Ore di ricevimento previste	6
Sintesi contenuti	The aim of the laboratory is, on the one hand, to support students in acquiring the content of the lecture "Fundamentals of Mathematics and its Didactics" through practical exercises in small groups. On the other hand, it is about the practical testing of substantial tasks, materials, media... for early mathematical education, with a special focus on the age group (0-)2-7 (kindergarten and first/second grade). The essential content of arithmetic is continued until the end of primary school and, conversely, the content covered there is dealt with in the laboratory in the 4th year of study (focus on ages 5-12), starting from kindergarten. Reflecting on the experiences made in the exercises and relating them back to the theory covered in the lecture is essential for the laboratory.
Argomenti dell'insegnamento	- Reflection and further development of own attitudes and behaviour towards mathematics and learning mathematics - Discovering, exploring, describing, continuing and explaining patterns and structures as the guiding principle of mathematical activity from kindergarten onwards - Games, everyday situations, substantial tasks and learning environments that stimulate and promote the (further) development of competences in the content areas addressed - Practical exercises for their own professional penetration as well

	as analysis and testing of current didactic concepts and related methods and didactic materials on the content areas "Counting and the development of number concepts", "Place value systems", "Arithmetic laws, arithmetic methods and arithmetic strategies in the four basic arithmetic operations", with continuous consideration of the general mathematical competences of problem solving, communication, representation, argumentation and modelling.
Modalità di insegnamento	Laboratory with theoretical input; individual, partner and group work, discussions; small written assignments serve first and foremost as preparation for the laboratory sessions; discussion of the assignments is an important part of the sessions. Performance assessment for the laboratory is based on work assignments, which must be completed outside of class by the specified deadlines.
Bibliografia obbligatoria	See required readings of the related lecture.
Bibliografia facoltativa	

Modulo del corso

Titolo della parte costituente del corso	Elementi di base della biologia e della chimica per la loro didattica
Codice insegnamento	12410C
Settore Scientifico-Disciplinare	BIOS-01/A
Lingua	Tedesco
Docenti	Prof. Dr.Dr. Robert Philipp Wagensommer, RobertPhilipp.Wagensommer@unibz.it https://www.unibz.it/en/faculties/education/academic-staff/person/40174
Assistente	
Semestre	Secondo semestre
CFU	3
Docente responsabile	
Ore didattica frontale	30
Ore di laboratorio	0

Ore di studio individuale	45
Ore di ricevimento previste	9
Sintesi contenuti	The aim of the lecture is to impart the basic subject-related and didactic knowledge required to stimulate and support learning processes in the field of science education, especially in the areas of biology and chemistry, from kindergarten to the end of primary school, orientated towards both the child and the subject, and to promote the individual potential of the children.
Argomenti dell'insegnamento	- Early science education in kindergarten and basic science education in primary school and its anchoring in the framework guidelines for kindergarten and primary school in South Tyrol. - Didactic principles of sustainable science education in kindergarten and primary school: science as an activity of observing, comparing, describing, classifying, asking questions, formulating hypotheses, drawing conclusions. - Development of science-related interests, abilities and skills in early childhood. - Current didactic concepts, principles and objectives of science education, particularly in the fields of biology and chemistry. - To be able to answer children's questions scientifically correctly. - Cells, living beings. - Atoms, molecules. - Photosynthesis. - Biodiversity, classification of living beings. - Structure of a plant: root, stem, leaf. - Flowers, fruits. - The most important animal groups. - Plant and animal species native to Trentino-South Tyrol.
Modalità di insegnamento	Lecture with media support, invitation to oral reflection, critical case discussion, videos.
Bibliografia obbligatoria	None
Bibliografia facoltativa	Fthenakis, W. E. (2009). Natur-Wissen schaffen - Band 3: Frühe naturwissenschaftliche Bildung. Bildungsverlag Eins. Hamman, M. & Asshoff, R. (2013) Schülervorstellungen im Biologieunterricht: Ursachen für Lernschwierigkeiten.

	Seelze-Velber: Klett-Kallmeyer. Labudde P. (2010). Fachdidaktik Naturwissenschaften. Haupt. Lück, G. (2018). Handbuch naturwissenschaftliche Bildung in der Kita. Herder Schmiemann, P. & Mayer, G. (Hrsg.) (2013). Experimentieren Sie! Biologieunterricht mit Aha-Effekt. Cornelsen Verlag. Stäudel L., Werber B., & Wodzinski R. (2006). Forschen wie ein Naturwissenschaftler: Das Arbeits- und Methodenbuch. Friedrich. The slides that will be uploaded during the course via the digital learning platform set up for the course.
