Titul dl curs	Linear Algebra
Codesc dl curs	76238
Titul suplementar	
SSD	MATH-02/A
Lingaz	Inglese
Curs de laurea	Corso di laurea in Informatica
D'autri cursc de laurea (cursc deberieda)	
Dozenc	prof. Bruno Carpentieri, Bruno.Carpentieri@unibz.it https://www.unibz.it/en/faculties/engineering/academic-staff/person/38064 dr. Mufutau Ajani Rufai, MufutauAjani.Rufai@unibz.it https://www.unibz.it/en/faculties/engineering/academic-staff/person/48142
Assistent didatich	
Semester	Primo semestre
Ann/Agn de stude	1
Credic universitars	6
Ores de insegnament	40
Ores de laboratore	20
Ores de stude individual	90
Ores de riceviment prevedudes	18
Ressumè di contegnus	- Background on complex numbers, trigonometry and polynomials - Vectors and matrices - Linear Systems - Vector spaces - Linear operators

	- Spectral analysis
Argomenc dl curs	The aim of this course is to present a rather comprehensive treatment of linear algebra and its applications, giving a general overview of the field. It covers vector and matrix theory to some degree of mathematical logic and rigor, emphasizing topics useful in other disciplines such as solving linear equations and computing determinants and eigenvalues of matrices. The course also provides practice in using linear algebra to think about problems in computer science, and in actually using linear algebra computations to address these problems.
Paroles clef	Linear algebra, vectors, dot product, orthogonality, matrices, matrix operations, linear systems, Gaussian elimination, LU factorization, rank, consistency, homogeneous systems, vector spaces, subspaces, basis, dimension, rank–nullity theorem, linear transformations, range, kernel, determinants, eigenvalues, eigenvectors, spectral analysis, applications in computer science.
Prerequisic aconsiés	There are no prerequisites for this course.
Cursc propedeutics	There are no prerequisites for this course.
Modalité de enseignament	The course includes frontal lectures and exercises.
Oblianza de frecuencia	Attendance is not compulsory, but non-attending students must contact the lecturer to agree on independent study modalities.
Obietifs formatifs y competenzes da arjonje	Knowledge and Understanding - D1.1: Have a solid knowledge of mathematical analysis, algebra, numerical calculus, discrete mathematics and elementary notion of logic that are in support of computer science Applying knowledge and understanding - D2.1: Be able to use the tools of mathematics and logic to solve problems. Ability to make judgments - D3.2: Be able to work autonomously according to the own level of knowledge and understanding. Communication skills - D4.1: Be able to use one of the three languages English, Italian and German, and be able to use technical terms and communication appropriately.

	Learning skills - D5.1: Have developed learning capabilities to pursue further studies with a high degree of autonomy.
Obietifs formatifs y competenzes da arjonje (informazions suplementares)	
Sort de ejam	The written exam will include verification questions, transfer-of-knowledge questions, and exercises. The aim is to assess the extent to which students have acquired knowledge and understanding, are able to apply that knowledge, and can demonstrate critical judgment. The same assessment criteria apply to both attending and non-attending students.
Criters de valutazion	The final written exam accounts for 100% of the grade and covers the entire program. Exam questions will be assessed based on correctness, clarity, quality of argumentation, and problem-solving ability. The same evaluation criteria apply to both attending and non-attending students.
