Ressumé di contegnus	The module provides - on the basis of Module 4 - an in-depth scientific understanding of a) the psychology of development in childhood and early adolescence over the course of the lifespan, particularly with regard to inclusion in primary school, and b) educational psychology and learning psychology as the basis for processes of teaching and learning, the motivation and development of talents, the design of learning environments and the assessment of learning processes in childhood and early adolescence. Both thematic focuses and perspectives of the lectures are related to the age range of childhood and early adolescence, i.e. the age from approx. 5 to 12 years, and are particularly focussed on processes of inclusion through labs. The overall module aims to impart basic pedagogical knowledge as well as the acquisition of specific professional competences.
Argomenc dl curs	See the individual course modules
Paroles clef	Developmental Psychology, Educational Psychology, Psychology of Learning, Inclusion, primary school
Prerequisic aconsiés	For optimal participation in this module, prior completion of Module 4 "Developmental and Educational Psychology 1 - Fundamentals" is recommended, as the content directly builds upon it.
Cursc propedeutics	
Modalité de insegnament	Lecture with media support, in-depth short group work, literature study.
Oblianza de frecuencia	In accordance with the regulation
Obietifs formatifs y competenzes da arjonje	Knowledge and understanding The students - know the methodological, theoretical and conceptual foundations of developmental psychology, educational psychology and learning psychology with a particular focus on middle childhood and primary school; - know the main physical, cognitive, emotional and social developmental stages in middle childhood and the corresponding theories;

	- know advanced forms and procedures of systematic observation and the documentation; - know the relevant theories on learning, motivation, cognition and memory in middle childhood; - know the conditions and criteria for conducive learning environments. Applying knowledge and understanding The students - are able to relate the technical foundations of developmental psychology, educational psychology and learning psychology to specific situations and cases and develop corresponding strategies for action in the area of childhood and primary school; - can use their knowledge of the developmental stages in childhood and adolescence for scientifically based pedagogical action; - can use observations for discussions within the team and with parents; - can create and evaluate conducive learning environments; - can recognise and deal with emotional, social and cognitive impairments to learning processes and apply strategies to promote the well-being of pupils. Judgement The students - are able to apply the specialist principles of developmental psychology, educational psychology and learning psychology to assess developments and progress in childhood and primary school; - can use observations and documentation to assess learning processes and the quality of educational processes (e.g. evaluate the effectiveness of intervention programmes); - can justifiably assess the role of motivation, co-operation and the development of strategies as well as the importance of feedback and recognition for the learning process; communication - are able to use the professional basics of developmental
--	---

	psychology, educational psychology and learning psychology to communicate in a team in order to carry out process- and result-orientated assessments; - are able to use their psychological knowledge to establish a constructive dialogue with pupils' parents. - are able to report, document and interpret observation results; - are able to use a differentiated and professionally relevant scientific vocabulary for communication and cooperation within the team and with social and health care professionals; Learning strategies The students - Can utilise theories of learning and learning strategies for their own personal and professional development; - Are able to use the professional foundations for their own further education and training and to familiarise themselves independently with further areas of research; - Are able to use learning strategies like scientifically trained experts.
Obietifs formatifs y competenzes da arjonje (informazioni supplementares)	
Sort de ejam	Ongoing assessment during the labs; final written module examination (single-choice test and open questions, see "Criteria...")
Criters de valutazion	Assignment of a single final assessment for the whole module based on A) a single-choice test with additional open questions and B) immanent coursework (see below). The assessment is based on the topics covered, the expected learning outcomes and the specific educational objectives according to the syllabus. A) Single-choice test and open questions: - On the content of the two lectures ('Developmental Psychology for Childhood and Adolescence with regard to Inclusion' and 'Educational Psychology and Learning Psychology for Childhood

	and Adolescence’). - Criteria for the assessment are Appropriate answers, logical structure, reference to literature, ability to critically analyse and reflect, use of scientific terminology, independent and reasoned judgement. B) Submission and assessment of immanent coursework for the two laboratories in the module (‘Observation and reflection of child behaviour with regard to inclusion (Lab.)’ and ‘Educational psychology and learning psychology for childhood and adolescence (Lab.)’) - Criteria for the assessment of these lab-related performances are: formal correctness, factual accuracy, own argumentation and reflection skills, theory-practice transfer performance. In accordance with the examination regulations of the faculty, the assessment for each individual course belonging to the module must also be positive for a positive overall assessment of the module performance. In the event of a negative assessment of the overall module, any positively assessed parts of the module will be credited the next time you take the module examination. Please note, however, that a negative assessment will also be included in the count of examination attempts in this case. According to the examination regulations, three attempts without passing will result in a block for three examination dates (see also Article 6, Paragraph 4 of the current examination regulations).

Ressumè di contegnus	As a continuation of Module 4, the lecture offers an introduction to the developmental psychological foundations of childhood and early adolescence and their pedagogical consequences, particularly with regard to inclusion. Particular attention is paid to cognitive, emotional, physical, motor, linguistic and moral development as well as the development of social bonds, social behaviour, identity and personality. In particular, the importance of these developmental psychological

	foundations for the area of middle childhood, especially primary school age and inclusion, will also be addressed. The lecture takes particular account of the significance of fundamental developmental psychological findings for the educational and institutional characteristics of the region.
Argomenc dl curs	Lebensabschnitte - ein Überblick (Lifespan - an overview): - Childhood - five/six to eleven/twelve years: Physical, cognitive, emotional and social development (Middle Childhood - Six to Eleven Years: Physical, cognitive, emotional and social development). Fields of Development: - Intelligence and Academic Achievement; - Theories of social development (Theories of Social Development); - Emotional development and regulation (Emotional Development and Regulation); - Relationship to Others and Development of Self (Attachment to Others and Development of Self); - Family Relationships and Peer Groups (The Family and Peer Relationships); - Moral Development; - Gender Development and Identity Construction (Gender Development and Identity Construction).
Modalité de enseignament	Lecture with media support, in-depth short group work, literature study. Preparation is expected.

Ressumé di contegnus	The ability to observe and reflect on children's behaviour is one of the basic skills of professional pedagogical work, particularly with regard to inclusive processes and structures. Based on the lecture, the laboratory deepens the knowledge and skills acquired in Module 4 on observation in theory and practice. This involves identifying processes and factors that determine observation and its interpretation with regard to inclusion, discussing the advantages and disadvantages of certain observation methods and evaluating quality characteristics, taking quantitative and qualitative methods into account. The testing and practical application of different types of observation, the documentation of observation data and theory-based interpretation should help students during their studies, in internships and in their later professional life to support the developmental steps and learning strategies of children, to strengthen their resources and to choose adequate educational strategies and resources. They should also help to take into account the diversity of children in inclusive settings and use

	observation in an ethical, pedagogically reflective and constructively productive way.
Argomenc dl curs	- In-depth study of socio-psychological aspects of perception and observation; - ethical principles and legal requirements for observation, especially in the context of inclusion; - Observation methods: from the research question to the choice of observation forms; instruments for observing cognitive, emotional and social competences; - Development of learning and support options based on the observations carried out; - the systematic documentation of observations and their reflection; the importance of portfolios; - Discussions with parents on the basis of documented observations.
Modalité de enseignament	Practical exercises based on theoretical input; analysis of observation sequences in small groups; analysis of observation procedures and documentation; case observation, evaluation and interpretation.
