Ressumé di contegnus	This cross-year course offers an introduction to basic writing skills in an academic context with a particular focus on text clarity (coherence), cohesion and conciseness of content as well as comprehensibility. At the beginning, the spectrum of text types to be written in the degree programme is explored. A guideline for the respective text type is used to work on specific examples of selected text types. Students are then encouraged and enabled to critically analyse academic literature, present controversies and argue their case. Another core content area of the course is the formal aspects and guidelines for academic writing, whereby the

	citation of academic literature in particular is dealt with in detail.
Argomenc dl curs	Academic Text Types and Writing Style - Overview of key academic text types in higher education - Internal and external text features - Academic writing style Developing Writing Competence - Precision and clarity - Cohesive devices (e.g. connectors) - Sentence structure: simple versus complex sentences - Function of adjectives in academic texts - Formal versus informal language - Redundancy and variation in language use Writing Process and Working with Sources - The writing process: from planning to proofreading - Developing a research question/thesis statement - Excerpting: summarising and paraphrasing - Citing sources and creating a reference list - Avoiding plagiarism
Paroles clef	Introduction to academic writing, academic text types, development of writing skills, writing process, source work

Obietifs formatifs y competenzes da arjonje	The aim of the course is to develop basic writing skills for university. Students name common types of academic texts and understand how they are typically structured. They develop an understanding of the specifics of academic language and begin to develop an academic writing style by writing their first short texts. Students can summarise scientific literature, compare it critically, present initial controversies and argue. In doing so, they apply the guidelines for correct academic writing. Knowledge and understanding Students name academic text types and describe the basic

	structure. They know the central criteria, basic rules and guidelines for writing a scientific text and are familiar with the ethical principles of scientific work. Applying knowledge Students write their own short paper that fulfils the basic expectations of a scientific text. Judgement In their written work, students show that they can critically analyse academic literature. They form an independent judgement about the quality of their work and derive possibilities for improvement. Communication Students demonstrate confidence in the use of different text types. They pay attention to clarity and comprehensibility as well as a formal scientific writing style in their work. Learning strategies Students make targeted use of reading and writing techniques and view the development of their writing skills as a continuous learning process over the course of their degree programme.
Obietifs formatifs y competenzes da arjonje (informazioni supplementares)	
Sort de ejam	Formativ Assessment: Literature list (documentation of the literature search) Sample excerpt focusing on paraphrasing skills Summative Assessment: Writing an independent essay on a self-chosen topic
Criters de valutazion	Assessment Criteria for the Literature List: - Complies with APA 7 formatting guidelines Assessment Criteria for the Sample Excerpt: - Fulfillment of the structural requirements - Meaningful paraphrasing of the original sources

	Assessment Criteria for the Essay - Fulfillment of the specific requirements of the text type - Consistency and clarity of structure - Textual coherence and cohesion - Precise, clear, and comprehensible argumentation - Use of academic literature - Use of academic language (objectivity, style, etc.) - Adherence to formal requirements (title page, formatting, etc.) and citation rules (APA 7)
