Syllabus

Kursbeschreibung

Titel der Lehrveranstaltung	Methods and applications for Empirical Economics
Code der Lehrveranstaltung	29128
Zusätzlicher Titel der Lehrveranstaltung	
Wissenschaftlich-disziplinärer Bereich	NN
Sprache	Englisch
Studiengang	Doktoratsstudium in Economics and Finance
Andere Studiengänge (gem. Lehrveranstaltung)	
Dozenten/Dozentinnen	
Wissensch. Mitarbeiter/Mitarbeiterin	
Semester	Erstes Semester
Studienjahr/e	2026/27
KP	2
Vorlesungsstunden	12 - 6 hours Prof. Fabio Pieri, 6 hours Prof. Chiara Tomasi
Laboratoriumsstunden	0
Stunden für individuelles Studium	0
Vorgesehene Sprechzeiten	0
Inhaltsangabe	The course introduces students to empirical analysis using observational data. After presenting the foundations of this type of analysis and discussing the main sources of microdata available for research, the course will address the problem of endogeneity and its main causes. The course adopts a “laboratory-based” approach. Lectures aimed at introducing the theoretical models and the main methodological issues will be followed by tutorials. During the tutorials, students will deepen their knowledge of econometric software and use real-

	world data for a range of applications. Possible applications include: estimating firms' productivity and market power; empirical analysis using international trade data; the use of patent data; and empirical analysis of market imperfections.
Themen der Lehrveranstaltung	Module 1: Firms in international trade (heterogeneous firms, export decisions, trade policies, productivity, quality). Module 2: Firms, hierarchies, and knowledge management.

Empfohlene Voraussetzungen	
Propädeutische Lehrveranstaltungen	
Unterrichtsform	• Frontal lectures • In class presentations by students
Anwesenheitspflicht	Required
Spezifische Bildungsziele und erwartete Lernergebnisse	PhD programme: The courses aim to train researchers with strong quantitative and theoretical skills, capable of analyzing economic and financial phenomena. Candidates' dissertations are expected to adhere to the highest standards of scientific rigor and to demonstrate innovative features that make them suitable for publication in leading international peer-reviewed journals. The programme therefore seeks to contribute to the international scientific debate in economics and finance. To this end, candidates will be encouraged to employ state-of-the-art methodologies and to adopt a multidisciplinary approach. The advanced training provided by the programme, together with the research methods required to complete the dissertation, prepares candidates both for an academic career and for high-level professional positions involving policy analysis and policymaking. Course 29128: • Acquire the skills to interpret empirical findings and relate them

	to relevant theoretical frameworks. • Gain methodological tools to refine and strengthen their Ph.D. research proposals in line with the approaches covered in the course.
Spezifisches Bildungsziel und erwartete Lernergebnisse (zusätzliche Informationen)	• Develop a solid understanding of modern methods for counterfactual analysis using observational data. • Critically assess different areas of application of these techniques.
Art der Prüfung	Individual presentation in which each student will have the opportunity to deepen the analysis of their Ph.D. research topic. The presentation should clearly define a specific research question, identify potential data sources, outline the appropriate empirical methodology, and discuss the main estimation challenges anticipated in the project.
Bewertungskriterien	Student evaluations will be based on several criteria: • The clarity with which they explain the research question (25%). • The appropriateness of the empirical methods proposed to address it (25%). • The originality and creativity in identifying potential data sources (25%). • Their critical ability to anticipate potential estimation challenges and suggest solutions for addressing them (25%).
