| Ressumé di contegnus                      | This course provides students with applied data analysis skills relevant to the public sector, with a focus on the informed use of computational tools rather than software development. Students are introduced to data extraction and database querying using SQL, at both a conceptual and practical level. The course also                                                                                                                                           |

|                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|                                                    | covers the theoretical foundations of relational databases, including relational algebra, Cartesian products, and relational operations, with an emphasis on their practical application in SQL. Particular attention is given to real-world data sources, including administrative and public sector data, in order to contextualize data extraction within digital public environments. By the end of the course, students will be able to extract and analyze data from relational databases, both from public and private sources, and use it effectively to support data-driven communication in a public policy context.                                                                                                                                    |
