

Syllabus

Syllabus

Titul dl curs	Preparatory Course in Mathematics
Codesc dl curs	99999
Titul suplementar	
SSD	STAT-04/A
Lingaz	Inglese
Curs de laurea	Corso di laurea in Economia e Management
D'autri cursc de laurea (cursc deberieda)	Bachelor in Economics, Politics and Ethics
Dozenc	dr. Luciano Marzufero, Luciano.Marzufero@unibz.it https://www.unibz.it/en/faculties/economics-management/academic-staff/person/49853
Assistent didatich	
Semester	Non definito
Ann/Agn de stude	1
Credic universitar	0
Ores de insegnament	20
Ores de laboratore	-
Ores de stude individual	-
Ores de riceviment prevedudes	0
Ressumè di contegnus	The course refers to the educational activities chosen by the student and belongs to the scientific area of Statistics-Mathematics. The course gives a general overview of scientific contents. Precalculus Mathematics is reviewed which prepares for the Mathematics for Economists course.
Argomenc dl curs	Sets: explanation, representation/notation, elements/subsets, unions, intersections, a few rules, Cartesian product.

	• Functions: general definitions, examples, real functions as important special case. • Very brief re-introduction of natural numbers, integers, rational and real numbers with basic arithmetic rules, percentages. Manipulating algebraic expressions, factoring out and expanding, manipulating fractions, polynomials. • Absolute values, powers and roots, exponentials, logarithms: definition, computation, rules. • Real functions: tables of values and graphical representation, absolute value function, polynomial (linear, higher degrees) and power functions, exponential and logarithmic functions. • Solving linear equations with one variable, a complete case study of quadratic equations including graphs, equations which can be solved via taking logarithms. • Solving two linear equations with two variables simultaneously, cases with none, one and infinitely many solutions, graphical interpretation as intersection of lines. • Solving inequalities: linear inequalities in one and two variables, inequalities involving absolute values in one variable. • (Optional) Definition of factorials and permutations, binomial coefficients, Pascal's triangle and combinations.
Paroles clef	Precourse; mathematics
Prerequisic aconsiés	none
Cursc propedeutics	none
Modalité de enseignement	lectures
Oblianza de frecuencia	not mandatory, but suggested
Obietifs formatifs y competenzes da arjonje	Educational objectives: (1) Refresh mathematical knowledge taught in high school, fill gaps and add a few new insights. (2) Motivate to experience and communicate (about) Mathematics. (3) Introduce mathematical vocabulary in English which is the language of the Mathematics for Economists course.
Obietifs formatifs y competenzes da arjonje (informazioni supplementares)	Knowledge and understanding Basic mathematical knowledge will be revised and consolidated, familiarity with elementary solution procedures (e.g. for quadratic equations) will be generated.

	Applying knowledge and understanding By elementary examples from economic theory, a basic understanding for the necessity of mathematical modeling in economics is aimed for. Making judgments The ability to make fundamental distinctions in Mathematics (linear vs. nonlinear, first order vs. higher order etc.) is aimed for. Communication skills Basic abilities to apply a mathematical language in an economical framework will be aimed for. The students will be challenged to talk to the professor and to each other about mathematical constructions. Mathematical vocabulary in English is introduced and/or reviewed. Learning skills Prepares for the Mathematics for Economists and Mathematics for EPE courses which require a solid understanding of mathematical concepts
Sort de ejam	Written final test on Friday – evaluation to be announced by the professor
Criters de valutazion	Written final test on Friday – evaluation to be announced by the professor
Bibliografia obligatora	Will be announced at the beginning of the course
Bibliografia aconsieda	Will be announced at the beginning of the course
