Syllabus

Kursbeschreibung

Titel der Lehrveranstaltung	Studio 1
Code der Lehrveranstaltung	47200
Zusätzlicher Titel der Lehrveranstaltung	TransLocalities
Wissenschaftlich-disziplinärer Bereich	
Sprache	Englisch
Studiengang	Master in Kritische Kreative Praxis
Andere Studiengänge (gem. Lehrveranstaltung)	
Dozenten/Dozentinnen	Mag. Indré Umbrasaité, Indre.Umbrasaite@unibz.it https://www.unibz.it/en/faculties/design-art/academic-staff/person/52529 Dott. Martina Angelotti, Martina.Angelotti@unibz.it https://www.unibz.it/en/faculties/design-art/academic-staff/person/54977
Wissensch. Mitarbeiter/Mitarbeiterin	
Semester	Erstes Semester
Studienjahr/e	1st year
KP	12
Vorlesungsstunden	90
Laboratoriumsstunden	0
Stunden für individuelles Studium	210
Vorgesehene Sprechzeiten	78
Inhaltsangabe	The course will allow students to conceive and develop personal projects that can integrate an ecocritical perspective into visual arts and design, with a profound awareness of contemporary

	environmental problems and their interrelation with up-to-date cultural production.
Themen der Lehrveranstaltung	By employing the notion of 'translocal' as a research and creative framework, both modules of Studio 1 will address the question of relationality between movement and placement from an eco-critical perspective. The subject will be contextualized in the contemporary condition of the Anthropocene and Capitalocene, as well as associated discussions on colonial and extractive practices, and climate in-justice in relation to the naturescultures of Bolzano. Such situated research will prompt structural questions of multi-local identities, movement over placement, boundary-crossing, place-based and more-than-human ecologies, multi species landscape and politics of territory. The engagement through design and art projects will address the forms of eco-critical practice, relational thinking, agency of making and, ultimately, expanded practices of care and commoning.
Stichwörter	Naturescultures, Ecocriticism, More-than-human, Translocalities, Care and Commons
Empfohlene Voraussetzungen	None
Propädeutische Lehrveranstaltungen	
Unterrichtsform	Corresponding to the practice-oriented and theoretical elements of the course, teaching combines weekly studio critiques with research, reading and writing assignments, complemented by group discussions, input sessions, field trips, and reviews.
Anwesenheitspflicht	not compulsory but recommended
Spezifische Bildungsziele und erwartete Lernergebnisse	Studio 1 Educational objectives Module 1 – Natures-Cultures: Research based Art and Design Integrate Ecocritical Perspectives into Artistic and Design Practices Enable students to develop personal projects that reflect a critical understanding of the relationship between nature and culture, addressing contemporary environmental challenges. Apply Research and Experimentation in Creative Processes Foster the ability to combine theoretical knowledge with hands-on experimentation to produce works that respond innovatively to ecological and cultural issues.

	Promote Environmental Awareness and Responsibility Encourage students to explore the role of artists and designers in promoting sustainability and ethical approaches to environmental problems. Develop Critical and Practical Skills Strengthen students' capacity for critical thinking, visual articulation, and practical execution through continuous feedback and interaction. Produce Reflective and Impactful Creative Outcomes Support students in creating works that not only showcase technical and conceptual rigor but also provoke thought and dialogue on environmental sustainability. Module 2 – Ecocriticism Develop a Theoretical Understanding of Ecocritical Disciplines Provide students with a solid foundation in key ecocritical fields, including environmental philosophy, cultural and visual ecocriticism, ecofeminism, and indigenous ecocriticism. Analyze Interactions Between Art, Nature, and Culture Explore the complex relationships between artistic practices and natural or cultural contexts, fostering a critical awareness of their environmental implications. Engage with Authoritative Theories and Case Studies Enable students to critically study general theories, specific case studies, and scholarly bibliographies to build a rigorous and well-rounded understanding of ecocritical practices. Stimulate Critical Thinking Encourage students to develop independent critical judgment through dialogic seminars, group discussions, and individual assessments. Apply Ecocritical Perspectives to Contemporary Issues Equip students with the tools to analyze and interpret contemporary artistic and cultural phenomena through an ecocritical lens, promoting informed and reflective engagement with environmental challenges. Learning outcomes Knowledge and understanding Students of the course will: - know ecocritical theories and their applications in visual arts and

	design - have specific knowledge of artistic and design techniques that promote environmental sustainability - understand the processes of interaction between artistic practices and natural contexts, analysing them while considering the connections with other fields of knowledge, such as philosophy, sociology and environmental sciences. Applying knowledge and understanding Students of the course will: - conceive and implement artistic and design projects that respond to contemporary environmental challenges, using sustainable materials and ecological techniques; - develop initiatives that involve local and global communities, promoting greater awareness and action towards environmental sustainability; - collaborate with scientists, activists and other professionals to integrate interdisciplinary knowledge into artistic and design projects. Making judgments Module 1-2 Students of the course will: - apply the knowledge acquired in the professional context; - devise original projects that take into account the transformations induced by globalization and internationalization processes. Module 2 Students of the course will: - collect and interpret cultural and material data from the fields of art, design, technology and spatial and curatorial practices, demonstrating the ability to place events, works and production operations in the historical context and current trends; - grasp the authority and evaluate the reliability of the various available sources; - reflect and express an independent judgement, including on social, ethical and political-cultural issues; - interpret specific facts and events, within subject of their field of study. Communication skills:

	Module 1: Students of the course will: - use visual and multimedia tools to create engaging and informative presentations. - collaborate in teams and communicate effectively with colleagues and professionals from different disciplines Module 2: Students of the course will: - write scientific and technical articles and reports with clarity and effectiveness; - present projects and ideas verbally in a professional and convincing manner. Learning skills: The course is aimed at: - strengthening the critical and operational autonomy of students; - developing their ability to choose, compare and adapt to new knowledge and technologies.
Spezifisches Bildungsziel und erwartete Lernergebnisse (zusätzliche Informationen)	Practical and theoretical investigation of the notion of 'translocal', reflecting on the relation between movement-circulation-flow to space-place-location; critical examination of the processes of globalization and extraction that perpetuate socio-ecological inequalities and dualisms, such as global versus local or national versus foreign; developed understanding of the processes involved in the simultaneous mobilization and localization of naturecultures, and their relationship with eco-critical artistic practice.
Art der Prüfung	To pass the course successfully, both the practical and the theoretical components of the modules must be completed. Failure in either part results in failing the course, as both are integral to the overall investigation. Continuous development of the project, along with the completion of individual assignments on time, will be assessed throughout the semester. Participation in the mid-term and final presentations is part of the evaluation process. N.B. – ALL STUDENTS TAKING THE EXAM AS NON-ATTENDING STUDENTS MUST AGREE UPON THE CONTENT WITH THE LECTURER.
Bewertungskriterien	Quality of research, authenticity of concept, completion of assignments throughout the semester, active participation and

	contribution to the collective investigation of the semester topic will form the basis for evaluation.

Vorlesungsstunden	60
Laboratoriumsstunden	0
Stunden für individuelles Studium	90
Vorgesehene Sprechzeiten	60
Inhaltsangabe	In the project Studio 1 the practice-based module "Nature-Cultures: Research based Art and Design" is integrated with the theoretical module "Ecocriticism". Considering the project's main topic for the semester, the course should allow students to conceive and develop personal projects that can integrate an ecocritical perspective into visual arts and design, with a profound awareness of contemporary environmental problems and their interrelation with up-to-date cultural production. Through hands-on workshops, research and experimentation, students should be given the opportunity to integrate the theories studied in module 2 in the production of works that reflect a critical understanding of contemporary environmental challenges, and that are capable of highlighting the responsibilities of artists and

	designers in promoting creative approaches to environmental sustainability
Themen der Lehrveranstaltung	,
Unterrichtsform	Studio-based teaching format is structured around weekly critiques, as well as mid- and final reviews. These are enriched by input sessions, mini-workshops, group discussions and excursions. The focus alternates between individual and collaborative modes of work, incorporating both theoretical investigations and hands-on experimentation. This approach is applied to a series of project-based assignments, building towards the completion of personal projects and forming the basis of the course's pedagogical strategy. The iterative project development process is reinforced through participation in instructor-student and peer-to-peer exchanges, cycles of feedback, reflection, and revision.

Inhaltsangabe	The course should be based on in-depth analysis of general theories, specific case studies and bibliographies, to provide students with a solid base of knowledge in the field of contemporary ecocritical practices to be taken into consideration and applied in the main outcome of the Studio 1. The teaching practice should provide concepts, tools, models that actively support the development of individual student projects, taking into account the semester topic of the studio. Furthermore, the contribution of the lecturer is aimed at critically discussing with the students the conceptualisation and production of the final outcome of the Studio in which the module is integrated.
Themen der Lehrveranstaltung	Ecocriticism; Ecology; Landscape; Territory; More-than-human; Multispecies; Political ecology; Anthropocene / Capitalocene; Colonialism and extraction; Climate justice; Care; Commons; Social practice; Translocality; Curating ecology.
Unterrichtsform	The course is structured with a theoretical part mixed with visual exercises that will be addressed individually and collectively; reading sessions and public discussions; art projects and case studies to be analyzed and discussed; excursions and visits outside.
