

Syllabus

Course Description

Course Title	Seminar 3: Learning from Experts
Course Code	96118
Course Title Additional	Learning from Experts
Scientific-Disciplinary Sector	NN
Language	English
Degree Course	Master in Eco-Social Design
Other Degree Courses (Loaned)	
Lecturers	Dott. Flora Mammana, Flora.Mammana@unibz.it https://www.unibz.it/en/faculties/design-art/academic-staff/person/45932
Teaching Assistant	
Semester	Second semester
Course Year/s	1st and 2nd year
CP	2
Teaching Hours	18
Lab Hours	0
Individual Study Hours	0
Planned Office Hours	6
Contents Summary	Along with the work on their projects and the regular courses, students choose Short Seminars, which provide complementary competencies helping them to sharpen their practice. The seminar in Learning from Experts provides a stage for students to engage directly with practitioners in the field of eco-social design. Through interviews, visits, and online sessions with experts working across diverse sectors with an eco-social design focus (such as community-led development, public sector, social entrepreneurship, activism, industry, research, etc.), students gain first-hand insights into real-world practices, challenges, and strategies. They learn how different professionals approach the

	design and implementation of eco-social projects, what methodologies they use, and how they design within complex systems.
Course Topics	Eco-Social Design & Practice; Mapping Professional Pathways; Methods for Engaged Dialogue; Case-study analysis; Collaborative Knowledge Generation; Feminist Qualitative Research; Transmission; Collective Zine / Instant Journal Making.
Keywords	Practitioner Insights; Eco-Social Design; Field Learning; Experiential Learning; Dialogical Pedagogy; Knowledge Co-Creation; Feminist Methodologies; Collaborative Publishing.
Recommended Prerequisites	
Propaedeutic Courses	
Teaching Format	This short seminar is conceived as an intensive, practice-oriented learning format centered on direct exchange with practitioners in Eco-Social design. Through curated video inputs, live online conversations, and in-person encounters, students engage with diverse fields such as community-led initiatives, public-sector innovation, activism, social entrepreneurship, and research. The seminar follows an ethical, dialogical, and non-extractive approach to learning from experts. Students explore how to approach practitioners with contextual sensitivity, formulate respectful invitations, and design encounters grounded in reciprocity and care. Knowledge is understood as relational and situated — generated through attentive listening, collective reflection, and shared interpretation. Inspired by Kat Jungnickel's concept of Transmissions, the seminar interweaves researching, making, and disseminating. Creative and experimental methods — including mapping, structured listening, short writing sessions, observation, and visual documentation — support collaborative knowledge production and critical engagement with contemporary Eco-Social challenges. The seminar culminates in the collaborative development of a fanzine that documents insights, reflects students' perspectives

	back to the invited experts, and contributes to broader knowledge generation and dissemination within the field of Eco-Social Design.
Mandatory Attendance	mandatory
Specific Educational Objectives and Learning Outcomes	Knowledge and understanding Students of the Master in Eco-social Design will have developed their own individual project practice and will be able to: - design, implement and manage projects - initiate, carry out and lead project-oriented research, development and design activities - involve stakeholders and actors in projects, identify their needs, conflicts and potentials and work productively with them - working with different experts, companies, organisations, groups and people Applying knowledge and understanding Students will be able to develop projects and practices suitable for addressing complex challenges. Making judgements Students will be able to take responsibility for the development and management of projects and activities. Communication skills Students will be able to: - communicate convincingly in different ways and with different audiences - present projects convincingly - argue creative and strategic decisions - show how the social, ecological and economic aspects of sustainability interact in their projects - organising and/or moderating discussions and creative processes among project stakeholders - communicate productively within the team - lead creative processes and teams Learning skills Students will be able to working independently to learn according to different situations and in a personal way through experimentation and planning.

Specific Educational Objectives and Learning Outcomes (additional info.)	Engage with practitioners using an ethical, dialogical, and non-extractive approach. Contextualize Eco-Social practices within broader social, political, and ecological challenges. Apply creative and collaborative methods for knowledge production and documentation. Reflect on and position their own emerging practice within Eco-Social transformation processes.
Assessment	As part of the assessment, students work in teams to develop pages for the final publication (fanzine). These pages present the invited practitioner's practice and the conversations, and include the students' own critical reflections using diverse creative transmission techniques (visual, textual, and experimental formats). The completed pages must be submitted prior to the examination date, as specified during the seminar. During the exam, each team gives an oral presentation summarizing the practitioner exchange and reflecting on key insights and learning outcomes.
Evaluation Criteria	Student work will be assessed according to three main criteria: - Participation and timeliness: Active engagement throughout the seminar and submission of work by the specified deadlines. - Documentation quality: Completeness and accuracy in recording the practitioner conversation. - Analytical and creative depth: Critical reflection, thoughtful analysis, and the use of diverse, creative methods for presenting insights.
