Titul dl curs	Large Language Models and Information Retrieval
Codesc dl curs	73072
Titul suplementar	
SSD	INFO-01/A
Lingaz	Inglese
Curs de laurea	Corso di laurea magistrale in Informatica per la Data Science
D'autri cursc de laurea (cursc deberieda)	
Dozenc	dr. Andrea Rosani, Andrea.Rosani@unibz.it https://www.unibz.it/en/faculties/engineering/academic-staff/person/43727
Assistent didatich	
Semester	Primo semestre
Ann/Agn de stude	2
Credic universitars	6
Ores de insegnament	40
Ores de laboratore	20
Ores de stude individual	90
Ores de riceviment prevedudes	
Ressumé di contegnus	<ul style="list-style-type: none"> • Web and mobile search • Boolean and vector-space retrieval models • Efficient document indexing, document mining and topic modelling • Traditional and machine learning-based ranking approaches • Foundation models • Evaluation of Information Retrieval Systems
Argomenc dl curs	This course provides a comprehensive introduction to the principles and techniques of Information Retrieval (IR), focusing on both

	<p>traditional methods and modern advancements.</p> <ul style="list-style-type: none"> • Web and Mobile Search: Techniques for indexing, ranking, and retrieving information in large-scale web environments and mobile contexts, including challenges like personalization, context-awareness, and interface constraints. • Boolean and Vector-Space Models: Fundamental retrieval models including Boolean logic and vector space approaches, forming the basis for understanding document representation and relevance scoring. • Efficient Indexing, Document Mining, and Topic Modelling: Methods for building scalable indexing structures, mining valuable information from text corpora, and uncovering latent topics using models like LDA. • Ranking Algorithms: Traditional and Machine Learning-Based: Examination of classic ranking methods (e.g., BM25, PageRank) alongside machine learning-based techniques, including learning-to-rank and neural models for improved relevance and user satisfaction. • Foundation Models: Application of large pre-trained language models (e.g., BERT, GPT) in IR tasks such as semantic search, question answering, and conversational retrieval. • Evaluation of IR Systems: Approaches to measuring the effectiveness of retrieval systems using metrics like precision, recall, MAP, and nDCG, as well as methods for conducting user-centered evaluations.
Paroles clef	<p>Indexing and Ranking Machine Learning for IR LLMs Foundation Models Evaluation Metrics</p>
Prerequisic aconsiés	<p>Programming and algorithm data structures skills, Linear algebra, probability theory, basic machine learning concepts.</p>
Cursc propedeutics	
Modalité de enseignament	<p>Frontal lectures, exercices, lab.</p>
Oblianza de frecuencia	<p>The attendance is not compulsory, but students are highly encouraged to attend.</p>
Obietifs formatifs y competenzes da arjonje	<p>The course belongs to the type "caratterizzanti – discipline informatiche".</p>

	<p>The objective of this course is to present the scientific underpinnings of the field of Information Retrieval (IR). The student will study fundamental, mathematically sophisticated IR concepts first and then more advanced techniques for information filtering and decision support, including transformer-based solutions and LLMs.</p> <p>This course provides students with a rich and comprehensive catalogue of information search and text processing techniques that can be exploited for the design and implementation of modern IR applications.</p> <p>Knowledge and understanding:</p> <ul style="list-style-type: none"> • D1.4 - Basic knowledge of storing, querying and managing large amounts of data and the associated languages, tools and systems <p>Applying knowledge and understanding:</p> <ul style="list-style-type: none"> • D2.2 - Ability to address and solve a problem using scientific methods <p>Making judgments</p> <ul style="list-style-type: none"> • D3.2 - Ability to autonomously select the documentation (in the form of books, web, magazines, etc.) needed to keep up to date in a given sector <p>Communication skills</p> <ul style="list-style-type: none"> • D4.1 - Ability to use English at an advanced level with particular reference to disciplinary terminology.
<p>Obietifs formatifs y competenzes da arjonje (informaziions suplementares)</p>	
<p>Sort de ejam</p>	<p>Final Project with report + oral exam</p> <p>The project will cover the learning outcome D2.2 and D3.2. It will consist of the design of an IR system in a specific application domain selected by the students.</p> <p>The project domain, the attacked problem, the techniques, and the obtained results must be described in a report (max. 10 pages). The project report will cover the learning outcome D1.4 and can be</p>

	<p>done in groups of 2-3 people.</p> <p>The oral exam will cover the learning outcome D4.1. It is composed by the discussion of the project and some individual questions on the content of the project itself.</p>
<p>Crìters de valutazion</p>	<p>Evaluation criteria</p> <ul style="list-style-type: none"> - Project: 50% of the mark - Report: 30% of the mark - Final oral exam: 20% of the mark. <p>Important note: both project and exam are required to be passed.</p> <p>Criteria for awarding marks</p> <p>Project: ability to implement data workflow to apply IR to real-world problems, correctness and clarity of the solution, experimental results, ability to solve IR problems with the appropriate technique.</p> <p>Report: ability to describe the proposed solution, with a critical approach describing the methodology and the results.</p> <p>Oral exam: ability to present and explain information retrieval concepts, methods and algorithms. ability to select appropriate solutions for IR problems.</p>
<p>Bibliografia obligatora</p>	<p>The suggested book for the introduction to information retrieval topics</p> <p>is:</p> <p>C. D. Manning, P. Raghavan and H. Schütze. Introduction to Information Retrieval, Cambridge University Press, 2008. (Online: http://informationretrieval.org)</p> <p>Papers about the most recent advancements with regards to algorithms, information access modalities and interfaces will be provided during the course in electronic format. Copy of the slides will be available as well.</p>
