Syllabus

Kursbeschreibung

Titel der Lehrveranstaltung	Digitales Gestalten: 3D CAD advanced
Code der Lehrveranstaltung	97097
Zusätzlicher Titel der Lehrveranstaltung	
Wissenschaftlich-disziplinärer Bereich	INFO-01/A
Sprache	Englisch
Studiengang	Bachelor in Design und Künste - Studienzweig Design
Andere Studiengänge (gem. Lehrveranstaltung)	
Dozenten/Dozentinnen	Dott. Ignacio Merino Sanchez-Fayos, Ignacio.MerinoSanchezFayos@unibz.it https://www.unibz.it/en/faculties/design-art/academic-staff/person/40053
Wissensch. Mitarbeiter/Mitarbeiterin	
Semester	Erstes Semester
Studienjahr/e	2nd and 3rd
KP	6
Vorlesungsstunden	60
Laboratoriumsstunden	0
Stunden für individuelles Studium	90
Vorgesehene Sprechzeiten	18
Inhaltsangabe	The course provides students with advanced knowledge and operational tools for digital design, modelling and 3D visualization.
Themen der Lehrveranstaltung	The "Digital Design: 3D CAD advanced" course will be organized around three primary pillars: 1. Advanced Surface Modeling.

	2. Poly/modeling for rapid 3D-sketching. 3. Rendering & Animation These pillars will be examined gradually throughout the semester, allowing students to expand their knowledge and apply it in increasingly complicated situations. Students will learn how to design complex high-quality surfaces with industry-standard tools like Rhinoceros. We'll look at the mathematical concepts underlying these surfaces and how they translate into practical design applications. As an extension of surface modeling, we'll look at Grasshopper's possibilities for parametric design. This section will highlight the effectiveness of computational design in tackling complicated design challenges and rapidly iterating through many design possibilities. While surface modeling is essential for precision, poly-modeling provides speed and flexibility in the design process using Blender. This module will focus on balancing speed and quality, allowing students to swiftly iterate on design concepts while also refining them for ultimate production. To complete the digital design process, students will acquire advanced rendering and basic animation skills in Blender. Students will learn how to produce precise renderings and compelling animations that successfully express their design concepts. By the end of the course, students will have developed a comprehensive understanding of advanced 3D CAD techniques and their application in real-world design scenarios. They will be equipped with the skills necessary to tackle complex design challenges and effectively communicate their ideas through digital media.
Stichwörter	3D modeling, advanced, surface, nurbs, digital, cad, poly, rendering, animation,Rhinoceros, Blender, 3D scaning
Empfohlene Voraussetzungen	Medium Rhinoceros knowledge Basic Keyshot/similar

Propädeutische Lehrveranstaltungen	To have passed the Drawing 3D CAD exam.
Unterrichtsform	The teaching approach will be practical and project-based, reflecting the reality of professional design work. Each lesson will generally include: 1. A quick theoretical introduction to today's topic. 2. Live presentation of procedures. 3. Guided practice: students apply the concepts to their own projects. 4. Open conversation and problem-solving sessions. Throughout the course, students will collaborate on a semester-long project that incorporates all areas of the curriculum. This project will imitate a real-world design brief, allowing students to see the whole design process from concept to presentation.
Anwesenheitspflicht	Not compulsory but recommended
Spezifische Bildungsziele und erwartete Lernergebnisse	Disciplinary competence Knowledge and understanding - have acquired the knowledge necessary to realise a project in the field of 3D CAD; - have acquired the basic knowledge necessary for further Master's studies in all components of project culture as well as in technical subjects, with a particular attention to the field of 3D CAD. Applying knowledge and understanding - use the basic knowledge acquired in the technical fields to realise a mature project; - make use of the skills acquired during the course of study in the event of continuing studies in a Master's degree programme and to develop them further. Transversal competence and soft skills Making judgements - Be able to make independent judgements for the purpose of developing their own design skills and in relation to all those

	decisions that are necessary to bring a project of 3D CAD to completion. Communication skills - present an independently realised project in the field of 3D CAD in the form of an installation, orally as well as in writing in a professional manner. Learning skills - have learned a work methodology at a professional level - in the sense of being able to identify, develop and realise solutions to complex problems by applying the acquired knowledge in the different fields, with a particular attention to the field of 3D CAD - in order to start a professional activity and/or continue their studies with a master's degree programme; - have developed a creative attitude and learned how to enhance it and develop it according to their own inclinations; - have acquired basic knowledge in the field of 3D CAD as well as a study methodology suitable for continuing studies with a Master's degree programme.
Spezifisches Bildungsziel und erwartete Lernergebnisse (zusätzliche Informationen)	None
Art der Prüfung	By the exam's date, each student must upload on the site of the faculty detailed documentation of the work done during the course. Documentation is an integral part of the exam. The documentation must include visual documentation and an abstract of the project. Student evaluation will be based on: 1. Weekly assignments (30%) 2. Mid-term project (30%) 3. Final project and presentation (40%) The final project will require students to demonstrate mastery of all course elements: advanced surface modeling, efficient poly modeling, and high-quality rendering and animation.

	N.B. ALL THE STUDENTS ATTENDING THE EXAM AS "OPT" OR AS NON-ATTENDING STUDENTS MUST AGREE UPON THE CONTENTS WITH THE TEACHER.
Bewertungskriterien	The final assessment is based on the content of all the exercises according to the following criteria: Attending and Non-attending One final mark: Threshold: 18/30 Relevant for the course will be the ability to think critically and clear communicate the design strategies and processes. Problem solving. Apply complex transformation tasks, move independently between different platforms and topologies, control of highly complex geometries.
Pflichtliteratur	None
