Syllabus

Descrizione corso

Titolo insegnamento	Linear Algebra
Codice insegnamento	76238
Titolo aggiuntivo	
Settore Scientifico-Disciplinare	MATH-02/A
Lingua	Inglese
Corso di Studio	Corso di laurea in Informatica
Altri Corsi di Studio (mutuati)	
Docenti	prof. Bruno Carpentieri, Bruno.Carpentieri@unibz.it https://www.unibz.it/en/faculties/engineering/academic-staff/person/38064
Assistente	
Semestre	Primo semestre
Anno/i di corso	1
CFU	6
Ore didattica frontale	40
Ore di laboratorio	20
Ore di studio individuale	90
Ore di ricevimento previste	
Sintesi contenuti	The aim of this course is to present a rather comprehensive treatment of linear algebra and its applications, giving a general overview of the field. It covers vector and matrix theory to some degree of mathematical logic and rigor, emphasizing topics useful in other disciplines such as solving linear equations and computing determinants and eigenvalues of matrices. The course also provides practice in using linear algebra to think about problems in computer science, and in actually using linear algebra computations to address these problems.

Argomenti dell'insegnamento	- Background on complex numbers, trigonometry and polynominals - Vectors and matrices - Linear Systems - Vector spaces - Linear operators - Spectral analysis
Parole chiave	Linear algebra, vectors, dot product, orthogonality, matrices, matrix operations, linear systems, Gaussian elimination, LU factorization, rank, consistency, homogeneous systems, vector spaces, subspaces, basis, dimension, rank–nullity theorem, linear transformations, range, kernel, determinants, eigenvalues, eigenvectors, spectral analysis, applications in computer science.
Prerequisiti	There are no prerequisites for this course.
Insegnamenti propedeutici	There are no prerequisites for this course.
Modalità di insegnamento	The course includes frontal lectures and exercises.
Obbligo di frequenza	Attendance is not compulsory, but non-attending students must contact the lecturer to agree on independent study modalities.
Obiettivi formativi specifici e risultati di apprendimento attesi	Knowledge and Understanding - D1.1: Have a solid knowledge of mathematical analysis, algebra, numerical calculus, discrete mathematics and elementary notion of logic that are in support of computer science Applying knowledge and understanding - D2.1: Be able to use the tools of mathematics and logic to solve problems. Ability to make judgments - D3.2: Be able to work autonomously according to the own level of knowledge and understanding. Communication skills - D4.1: Be able to use one of the three languages English, Italian and German, and be able to use technical terms and communication appropriately. Learning skills - D5.1: Have developed learning capabilities to pursue further

	studies with a high degree of autonomy.
Obiettivi formativi specifici e risultati di apprendimento attesi (ulteriori info.)	
Modalità di esame	The written exam will include verification questions, transfer-of-knowledge questions, and exercises. The aim is to assess the extent to which students have acquired knowledge and understanding, are able to apply that knowledge, and can demonstrate critical judgment. The same assessment criteria apply to both attending and non-attending students.
Criteri di valutazione	The final written exam accounts for 100% of the grade and covers the entire program. Exam questions will be assessed based on correctness, clarity, quality of argumentation, and problem-solving ability. The same evaluation criteria apply to both attending and non-attending students.
