

Syllabus

Kursbeschreibung

Titel der Lehrveranstaltung	Project 1 in Eco-Social Design
Code der Lehrveranstaltung	96122
Zusätzlicher Titel der Lehrveranstaltung	
Wissenschaftlich-disziplinärer Bereich	
Sprache	Englisch
Studiengang	Master in Ökosozialem Design
Andere Studiengänge (gem. Lehrveranstaltung)	LM-12 Eco-Social Design - 2019
Dozenten/Dozentinnen	<p>PhD Mustapha El Moussaoui, Mustapha.ElMoussaoui@unibz.it https://www.unibz.it/en/faculties/design-art/academic-staff/person/46595</p> <p>dr. Teresa Palmieri, Teresa.Palmieri@unibz.it https://www.unibz.it/en/faculties/design-art/academic-staff/person/47597</p> <p>dr. Jacopo Ammendola, Jacopo.Ammendola@unibz.it</p> <p>Prof. Sónia Amélia Cabral Matos, Sonia.CabralMatos@unibz.it https://www.unibz.it/en/faculties/design-art/academic-staff/person/48172</p>
Wissensch. Mitarbeiter/Mitarbeiterin	
Semester	Erstes Semester
Studienjahr/e	1st
KP	15
Vorlesungsstunden	60 (CIS), 60 (OSS), 30 (DR)

Laboratoriumsstunden	0
Stunden für individuelles Studium	0
Vorgesehene Sprechzeiten	60 (CIS), 60 (OSS), 9 (DR)
Inhaltsangabe	<p>Project 1 is an introduction into thinking and doing eco-social design. At the outset, students learn to conceptualise and approach contemporary social and ecological challenges as inextricably intertwined. They are confronted with issues of socio-ecological transformation at a global level and in relation to local contexts by interacting with local actors and dynamics. Hence, they are guided to discover and experiment with design practices which bring awareness to and stimulate social, cultural and material change to contribute to more sustainable futures. Within this frame, students develop projects in small teams – from project definition to prototyping.</p> <p>Project 1 is led by a team of teachers: design practitioners, covering the areas Objects–Spaces–Services and Communication–Interaction–Services. They provide inputs, facilitate learning experiences and coach students in designing objects, spaces, services, communication strategies, tools for social interaction, participation and storytelling which can contribute to socio-ecological transformation in contextualised ways bringing in best practice from socially, politically and environmentally engaged design.</p> <p>The course works in close and continuous collaboration with the Design Research related to Project 1 module, as the two are intended to complement, enrich and support one another, also involving learnings from the courses of the area Observe, Analyse & Apply, hands-on experimentation and prototyping supported by Make & Intervene courses.</p>
Themen der Lehrveranstaltung	<p>“The question of what kind of city we want cannot be divorced from the question of what kind of people we want to be, what kind of social relations we seek, what relations to nature we cherish, what style of life we desire, what aesthetic values we hold” (Harvey, 2012: 4). Starting from these considerations, the course takes the form of an "Open City Laboratory" in which to imagine and explore situated proposals for moving towards more ecologically sustainable, solidary and just ways of living, producing and consuming in the city. Towards this end, in the first phase of</p>

	<p>the course, we engage in listening to and orienting ourselves towards what the city of Bolzano has to tell us, what it has to offer and what it might need. We do this by interacting with local actors from civil servants to citizen-groups, from local experts to NGOs and activists. We immerse ourselves in the context, we traverse the city, explore its socio-material infrastructure and practices, investigate existing data and visions. We always critically reflect on these engagements guided by design and research approaches. In this way we frame possible design spaces for intervention with care and responsibility and in interaction with the local context. We develop and prototype proposals for socio-ecological transformation at a city level which can take different forms, from transformative future scenarios to concrete site-specific interventions, from design tools for transformation to new shared, circular systems and collective services.</p>
Stichwörter	<p>Eco-social Design, Participatory and Co-design, Situated Design, Circular Design, Transition Design, Design Research, Research-through-design, Socio-ecological Transformation, Commoning, Coexistence.</p>
Empfohlene Voraussetzungen	<p>Experience in self-motivated and -organized project work</p>
Propädeutische Lehrveranstaltungen	<p>none</p>
Unterrichtsform	<p>Project-work with a balanced mix of lectures, field work, exercises and experiments, workshops, concepts and prototypes development, presentations and reviews (individually and in groups), interventions by external experts and field trips.</p>
Anwesenheitspflicht	<p>highly recommended</p>
Spezifische Bildungsziele und erwartete Lernergebnisse	<p>Knowledge and understanding</p> <p>Students will have developed their own individual project practice and will be able to:</p> <ul style="list-style-type: none"> - design, implement and manage projects - develop creative solutions and processes - involve stakeholders and actors in projects, identify their needs, conflicts and potentials and work productively with them - designing the aesthetic dimension of projects or collaborating in design - developing prototypes or delegating their development

	<ul style="list-style-type: none"> - developing interventions and events or delegating their development - test and evaluate prototypes, interventions, events or their individual elements, or delegate their testing/testing and evaluation. <p>Applying knowledge and understanding</p> <p>Students will be able to:</p> <ul style="list-style-type: none"> - develop projects and practices suitable for addressing complex challenges. - make tangible ideas, reports and projects, such as sketches, visualisations, mock-ups, models, prototypes, interventions and prototype events <p>Research and from courses of the area Observe, Analyse & Apply</p> <ul style="list-style-type: none"> - be able to co-create original ideas for effective projects, aiming at desirable and viable Eco-Social transitions - be able to develop effective projects in given situations (see above) with the above mentioned aims - setup and organize a project according to its requirements, across all phases: initial research, finding, project development, exploration and experimentation, prototyping, testing and publishing / exhibiting. - be able to design and build mockups, functional models and/or other artifacts, which make the project tangible and testable, integrating methods and skills from courses of the area Make & Intervene - Integrate approaches, knowledges, methods, competences, skills and technologies from multiple fields and (design) disciplines <p>Making judgments</p> <p>Students will be able to:</p> <ul style="list-style-type: none"> - take responsibility for the development and management of projects and activities - judging independently and critically: concepts and drafts <p>Communication skills</p> <p>Students will be able to:</p> <ul style="list-style-type: none"> - communicate convincingly in different ways and with different audiences
--	--

	<ul style="list-style-type: none"> - present projects convincingly - argue creative and strategic decisions - communicate productively within the team - lead creative processes and teams <p>Learning skills</p> <p>Students will be able to:</p> <ul style="list-style-type: none"> - working independently to learn according to different situations and in a personal way through experimentation and planning - working independently to learn according to different situations and in a personal way through the development of prototypes, models, mock-ups and the feedback they provide - organising learning processes
Spezifisches Bildungsziel und erwartete Lernergebnisse (zusätzliche Informationen)	
Art der Prüfung	<p>The final exam will consist of a public presentation of the group project(s) developed during the course, that will be required to include all the aspects of the project development process, including initial and contextual research, critical analysis and positioning, participatory and inclusive methodologies, communication and storytelling strategies, prototyping tools.</p> <p>Before taking the exam, the students will be required to produce and file:</p> <ul style="list-style-type: none"> - A project documentation in the form of a booklet - A project documentation in the form of a faculty portfolio entry - An exhibition during the faculty semester show (GOG) <p>Assessment for NON-ATTENDING STUDENTS will be based on the presentation of the project developed by the students. Along with the project outcome, non-attending students need to be able to thoroughly present the design and research process that lead to it, including understanding of the local context, collaboration with local actors and design decisions taken. Also non attending students need to produce and file the documents and exhibition mentioned above.</p>
Bewertungskriterien	Student performance in this course will be evaluated based on a

	<p>combination of individual and group work, emphasising both process and outcomes. The assessment criteria are as follows:</p> <p>Project Work: Students will develop one or more design projects that reflect their understanding of the course's central themes, particularly their ability to understand the city as a context for eco-social transformation. The project will be evaluated based on creativity, conceptual depth, and the ability to propose innovative solutions.</p> <p>Regular feedback sessions will track progress, and final submissions will be presented at the end of the course.</p> <p>Research and Critical Analysis: Students will be required to conduct research that critically engages with contemporary socio-ecological challenges at multiple scales, from local to global, and reflects on how design can contribute to viable socio-ecological transformations. This component will be assessed through written reports and presentations.</p> <p>Participation and Collaboration: Active participation in discussions, workshops, and collaborative activities with peers and the Design Research course is essential. Assessment will focus on the student's contribution to the collective learning process, including teamwork, constructive feedback, and engagement with different perspectives.</p> <p>Reflection and Documentation: Students are expected to maintain a reflective journal or portfolio documenting their design process, challenges encountered, and personal insights. This will be assessed for depth of reflection and engagement with course topics. A final documentation must be submitted (as portfolio web page and booklet) which must communicate the project starting from its development process.</p> <p>The final evaluation of the design projects and research will also take in account the following criteria:</p> <ol style="list-style-type: none"> 1. Eco-Social agency <p>Impacts and potentials for positive eco-social change</p>
--	--

	<p>2. Qualities of the designed artefacts Aesthetic and technical qualities, and in how far these qualities foster the eco-social agency. How they build upon the state of the art in your chosen field and (design) disciplines. Boldness and vigour of experimentation and design exploration.</p> <p>3. Conceptual framing, reflection and future perspectives Understanding of the given situation, relevant actors and the potential for positive change. Critical analysis, synthesis, reflection and evaluation. Understanding of iterative development and future perspectives.</p> <p>4. Relations, processes and organisation Understanding and managing relations and processes with the project team, collaborators, partners, stakeholders and other actors. Project management.</p> <p>5. Storytelling Effectiveness and potential in communicating the project to relevant publics. Quality and effectiveness of presentation techniques and narrative. How well the story attracts attention, convinces and touches audiences. Defence of your proposition and your response to critics.</p>

Inhaltsangabe	<p>In the first semester students from diverse disciplinary and professional backgrounds get a full immersion in eco-social design practices, informed and strengthened by Design Research related to Project 1. The teacher works in close collaboration with the project leaders of Project 1.</p> <p>Design Research related to Project 1 module introduces students to the design research landscape, focusing on eco-social transformation. While integrating lectures with hands-on exercises, we will explore different research tools, methods, and approaches within real-life projects. The course introduces students to qualitative research with a strong focus on ethnographic methods such as observation, interviews, field notes and research ethics. The course will also introduce students to context mapping techniques. Teaching sessions are designed to help students select relevant research approaches to gather information and knowledge regarding the context of their project while supporting the development of critical reflections on the knowledge generated through their research.</p>
Themen der Lehrveranstaltung	<ul style="list-style-type: none"> • Probing qualitative and design-led research for eco-social transformation. • Exploring the role of artefacts in research. • Participatory and co-design approaches, methods, tools, and processes. • Developing generative praxis and reflexive skills as a design initiator, facilitator, researcher, and practitioner.
Unterrichtsform	<p>Lectures, seminars, workshops, exercises, group projects, external visits, and colloquia. During workshops and exercises students will be given time to develop and apply research approaches, methods, and tools to their team projects. Testing tools and discussion of their application in projects will be made on location (where appropriate) and in the atelier.</p>
Pflichtliteratur	<ul style="list-style-type: none"> • Koskinen, I.; Zimmerman, J.; Binder, T.; Redström, J. and Wensveen, S. (2011). <i>Design Research Through Practice. From the Lab, Field, and Showroom</i>. Amsterdam: Morgan
