Syllabus

Descrizione corso

Titolo insegnamento	Rappresentazione di componenti meccanici con software CAD
Codice insegnamento	42201
Titolo aggiuntivo	
Settore Scientifico-Disciplinare	IIND-03/B
Lingua	Inglese
Corso di Studio	Corso di laurea in Ingegneria Industriale Meccanica
Altri Corsi di Studio (mutuati)	
Docenti	prof. Yuri Borgianni, Yuri.Borgianni@unibz.it https://www.unibz.it/en/faculties/engineering/academic-staff/person/35189
Assistente	
Semestre	Secondo semestre
Anno/i di corso	1
CFU	3
Ore didattica frontale	16
Ore di laboratorio	18
Ore di studio individuale	41
Ore di ricevimento previste	9
Sintesi contenuti	The scope of the course is to introduce the most important mechanical components, their function, and their representation in the technical drawing; this is supported using 2D CAD systems.
Argomenti dell'insegnamento	Tolerancing and errors Mechanical components Joints and connections Bearings Assemblies 2D-CAD

Parole chiave	Tolerance; roughness; mechanical connection; bearing; CAD
Prerequisiti	The completion of the course "Fundamentals of Technical Drawing", which provides the necessary concepts for the understanding of the present course. The concepts illustrated in "Fundamentals of Technical Drawing" will be taken for granted
Insegnamenti propedeutici	
Modalità di insegnamento	Lectures; exercises; explanations supported by the use of a 2D-CAD application (AutoCAD)
Obbligo di frequenza	Attendance is not compulsory
Obiettivi formativi specifici e risultati di apprendimento attesi	Knowledge and understanding 1) tolerances and errors in mechanical parts 2) functioning of machine elements within mechanical systems 3) representation of main machine elements and assemblies 4) usage of a 2D-CAD system for technical drawings of mechanical systems Applying knowledge and understanding 5) applying drawing standards correctly 6) approaching the design of mechanical structures 7) identification of criticalities and alternatives in mechanical systems Making judgements 8) pointing out pros and cons with respect to the choice of tolerances and surface roughness values in mechanical components 9) evaluating which machine elements are best integrated in complex technical systems, according to constraints and expected

	performances 10) evaluating which CAD functions are most supportive and pertinent according to the scopes of technical representation Communication skills 11) using the appropriate terms for the illustrated mechanical components and their variants 12) describing the function of the illustrated mechanical components in an effective way Learning skills 13) Ability to autonomously extend the knowledge acquired during the study course also through a project run independently
Obiettivi formativi specifici e risultati di apprendimento attesi (ulteriori info.)	-
Modalità di esame	The assessment will be made based on a project of a mechanical assembly, which will be then discussed during an oral examination. The latter might include other questions and exercises related to the presented contents. The project will be proposed by the student and agreed on with the lecturers. The assembly and its parts will be drafted (i.e. represented accordiing to the rules of technical drawing along with dimensions and tolerances) through the used 2D-CAD software and then transformed into pdf files (one file for each assembly and parts requiring drafts). The assessment will take into account the quality of the project, the correctness of the representations made in line with the rules and standards of the technical drawing, the answers to the questions asked during the oral examination. Dates, deadlines, and further project requirements will be communicated during the course. Summative assessment: 70% Project (addressed Learning Outcomes 1-6, 13)

	30% Oral exam (addressed Learning Outcomes 7-12)
Criteri di valutazione	In line with the addressed Learning Outcomes 1-6, the evaluation criteria of the project include the correctness of the drawing in terms of representation and choice of mechanical components, the accurate indication of tolerances, the effective use of the 2D-CAD system. Students will be encouraged to explore the integration of mechanical components that have been treated in the course (Learning Outcome 13). In line with the addressed Learning Outcomes 7-10, students will be asked, during the oral exam, to justify their choices, indicate alternatives, show their proficiency in the use of the 2D-CAD system. The oral exam will also test communication skills with particular reference to the correctness of the used technical language and the capability of describing the mechanical function of components and assemblies (Learning Outcomes 11, 12). The oral exam will also serve to verify the actual commitment of each student in the presented project.
Bibliografia obbligatoria	Slides and other materials provided by the lecturers during the course. All materials will be shared in the repository used (MS Teams).
Bibliografia facoltativa	To extend the knowledge of mechanical components and assemblies, many handbooks are available. The most updated one, coping with standards that apply in Italy, is "Vademecum per Disegnatori e Tecnici" (Baldassini, Fiorineschi), 24th edition.
