## *Descrizione corso*

<b>Titolo insegnamento</b>	Fisica Tecnica
<b>Codice insegnamento</b>	42173
<b>Titolo aggiuntivo</b>	
<b>Settore Scientifico-Disciplinare</b>	IIND-07/B
<b>Lingua</b>	Inglese
<b>Corso di Studio</b>	Corso di laurea in Ingegneria Industriale Meccanica
<b>Altri Corsi di Studio (mutuati)</b>	
<b>Docenti</b>	<p>prof. Marco Baratieri,  Marco.Baratieri@unibz.it  <a href="https://www.unibz.it/en/faculties/engineering/academic-staff/person/27442">https://www.unibz.it/en/faculties/engineering/academic-staff/person/27442</a></p> <p>prof. Andrea Gasparella,  andrea.gasparella@unibz.it  <a href="https://www.unibz.it/en/faculties/engineering/academic-staff/person/30619">https://www.unibz.it/en/faculties/engineering/academic-staff/person/30619</a></p> <p>dr. Fabian Chidubem Eze,  FabianChidubem.Eze@unibz.it  <a href="https://www.unibz.it/en/faculties/engineering/academic-staff/person/53713">https://www.unibz.it/en/faculties/engineering/academic-staff/person/53713</a></p>
<b>Assistente</b>	
<b>Semestre</b>	Secondo semestre
<b>Anno/i di corso</b>	2
<b>CFU</b>	10
<b>Ore didattica frontale</b>	60
<b>Ore di laboratorio</b>	30
<b>Ore di studio individuale</b>	160
<b>Ore di ricevimento previste</b>	30
<b>Sintesi contenuti</b>	The aim of the course is to provide the students with a suitable knowledge of the general scientific contents, of the methods and

	<p>of some specific professional skills.</p> <ul style="list-style-type: none"> <li>- Fundamentals of Thermodynamics;</li> <li>- Energy conversion;</li> <li>- Energy of open and closed systems</li> <li>- Heat transfer;</li> <li>- Mass transfer;</li> <li>- Ideal gases;</li> <li>- Process;</li> <li>- Irreversibility.</li> </ul>
<b>Argomenti dell'insegnamento</b>	
<b>Parole chiave</b>	
<b>Prerequisiti</b>	
<b>Insegnamenti propedeutici</b>	
<b>Modalità di insegnamento</b>	<p>The course consists of classroom lectures introducing theoretical concepts and exercise classes providing numerical examples of technical application. Lectures format includes blackboard, slides, videos, etc. Integrative teaching material (handouts) will be available for the students through the teams file repository.</p>
<b>Obbligo di frequenza</b>	Not compulsory.
<b>Obiettivi formativi specifici e risultati di apprendimento attesi</b>	<p>The course belongs to the type "caratterizzanti".</p> <p>The course deals with the fundamentals of engineering thermodynamics, which are needed to understand the conventional and innovative energy conversion systems. The study of prime movers based on direct cycles (steam and gas cycles) and inverse cycle systems is presented. Fundamentals of heat transfer and heat exchanger design and operation and thermodynamics of moist air complete the course program. The students will learn theoretical concepts as well as acquire the ability to apply these concepts to some reference system calculations.</p> <p>The learning outcomes need to refer to the Dublin Descriptors:</p> <p>Knowledge and understanding</p> <p>1. Knowledge and understanding of the fundamentals topics dealing with technical systems' energy balance, heat transfer</p>

	<p>mechanisms and thermodynamic processes.</p> <p>Applying knowledge and understanding</p> <p>2. Applying knowledge and understanding to the solution of energy balance analysis and to the quantification of energy fluxes within and among physical systems</p> <p>Making judgements</p> <p>3. Making judgments through the acquisition of the basics of the thermodynamic analysis of complex systems and the analysis approach based on simplification and de-structuration.</p> <p>Communication skills</p> <p>4. Communication skills dealing with the correct use of highly specific terms and definitions, including the correct use and conversion of the units of measurement</p> <p>Ability to learn</p> <p>5. Lifelong learning skills through the comparison of different sources, and engineering methods and the acquisition of a critical sense.</p>
<p><b>Obiettivi formativi specifici e risultati di apprendimento attesi (ulteriori info.)</b></p>	
<p><b>Modalità di esame</b></p>	<p>- Formative Assessment: In class exercises and discussion: 30 hours (average duration 30 minutes/exercise); ILOs assessed: 1, 2, 3, 4, 5;</p> <p>- Summative Assessment: The exam consists of two written parts.</p> <p>The first deals with the solution of a well-structured numerical exercise related to the calculation of energy balance and exchanges of the technical systems considered in the course. This way we can assess the ability of the student of applying the knowledge and understanding of the analysis and solution</p>

	<p>techniques, and of making judgment and to correctly use the units of measurement.</p> <p>The second one consists of some open questions dealing with theoretical aspects of each main topic of the course (engineering thermodynamics, heat transfer, thermodynamics of moist air). This way the knowledge and understanding of the fundamental topics, the written communication skills are assessed.</p> <p>33% written exam, numerica exercise: 1 exercise (1 hour); ILOs assessed: 1, 2, 3;</p> <p>67% written exam, theory: 3 open-ended questions (1.5 hours); ILOs assessed: 1, 2, 3, 4, 5.</p>
<p><b>Criteria di valutazione</b></p>	<p>To the admission to the second part the first one has to be successfully passed.</p> <p>The first part (numerical exercise) consists of six numerical questions. The answer is correct when the number provided is within a given tolerance with respect to the reference value. Each student works on the same problem but with personal starting data. The evaluation is based on the accuracy of the numerical result of each question. The starting mark is assigned considering 3 points per each correct answer (starting from 12).</p> <p>The score of this part contributes for 1/3 to the final mark.</p> <p>In the second part, each question – out of the proposed 3 – concerns a different section of the program (applied thermodynamics, heat transfer, thermodynamics of moist air). It equally contributes to the mark, with the exception of one of the 3, which is 4/3 of the others- and requires some steps to prove a proposition. The evaluation is based on the completeness of the answer in terms of 1) definition of the subject 2) analytical description 3) graphical and mathematical representations 4) proof (if required)</p> <p>The score of this second part contributes for 2/3 of the final mark.</p>
<p><b>Bibliografia obbligatoria</b></p>	<p>Teacher's handouts and booklets (available in the reserve collection).</p>
<p><b>Bibliografia facoltativa</b></p>	<p>· G.F.C. Rogers, Yon Mayhew. Engineering Thermodynamics: Work and Heat Transfer (4th Edition/or later) Pearson Education (1996)</p>
