

Syllabus

Descrizione corso

Titolo insegnamento	Project, Process and Technology Management
Codice insegnamento	47540
Titolo aggiuntivo	
Settore Scientifico- Disciplinare	
Lingua	Inglese
Corso di Studio	Corso di laurea magistrale in Ingegneria Industriale Meccanica
Altri Corsi di Studio (mutuati)	
Docenti	prof. Patrick Dallasega, Patrick.Dallasega@unibz.it https://www.unibz.it/en/faculties/engineering/academic- staff/person/33073 prof. Guido Orzes, Guido.Orzes@unibz.it https://www.unibz.it/en/faculties/engineering/academic- staff/person/36819
Assistente	
Semestre	Primo semestre
Anno/i di corso	1
CFU	10
Ore didattica frontale	56
Ore di laboratorio	36
Ore di studio individuale	0
Ore di ricevimento previste	
Sintesi contenuti	The course is one of the basics of the scientific area of Industrial Engineering. The course gives a general overview of the main scientific contents. During the course, the presented theoretical topics will be integrated through targeted application-oriented exercises and through a real game-based business simulation.

The learning objectives of module 1 are to introduce engineering students in the fundamentals of project management. Specifically, it will deal with the subjects of project planning, project scheduling and project monitoring.

The learning objectives of module 2 are to introduce students to the fundamentals of process and technology management. In particular, the part that concerns the process management will deal with process identification, modelling and redesign and the part that concerns the technology management will deal with technology foresight and related methods.

Argomenti dell'insegnamento

Module 1 - Project Management

- 1. Introduction to Project Management
- 2. Project planning
- a) The Work Breakdown Structure (WBS)
- b) The Organizational Breakdown Structure (OBS)
- c) Planning of resources
- 3. Project scheduling methods
- a) Network diagram techniques (AOA, AON)
- b) The Critical Path Method (CPM)
- c) The Program Evaluation Review Technique (PERT)
- d) Project Crashing
- e) Resource allocation
- 4. Project progress measurement and forecast
- a) Progress measurement
- b) The Earned Value Analysis (EVA)
- c) The Earned Value Performance Measurement (EVPM)
- 5. Project risk management
- a) Methodologies for project risk identification
- b) Methodologies for project risk evaluation
- 6. Construction Project Management
- a) The Last Planner System (LPS)
- b) The Location Based Management System (LBMS)
- 7. Exercises
- a) Exercises on AOA, AON
- b) Exercises on CPM, PERT, project crashing, resource allocation
- c) Exercises on EVA
- d) Exercises using Microsoft Project
- e) Last Planner Simulation game
- f) Excursion to local companies to provide practical illustrations

	of project management processes.
	Module 2 - Process and Technology Management
	4. Process management
	a) Introduction to business process management
	b) Process identification and description
	c) Process modelling (Business Process Model and Notation -
	BPMN)
	d) Process discovery
	e) Process analysis
	f) Process redesign
	Exercises:
	Exercises on process modelling using the BPMN
	software BIZAGI
	Case study (process modelling and redesign)
	5. Technology management
	a) Introduction to technology management
	b) Technology management activities: acquisition, exploitation,
	identification, protection, selection
	c) Technology management tools: portfolio management, patent
	analysis, value analysis, stage-gate, S-curve, technology
	roadmapping
	Exercises on technology management
Parole chiave	project management, process management, technology
	management, project scheduling, project monitoring
Prerequisiti	None
Insegnamenti propedeutici	
Modalità di insegnamento	Frontal lectures and exercises in class (laptops are required for
	some lectures and exercises).
Obbligo di frequenza	Recommended
Obiettivi formativi specifici e	Intended Learning Outcomes (ILO)
risultati di apprendimento	
attesi	Module 1 - Project Management
	Knowledge and understanding:
	1. The students know the basic and most common

methodologies of Project Management (Planning, Scheduling and Monitoring) and the main used tools.

2. The students are able to understand the issues relating to the development, implementation and management of production and logistics systems;

Applying knowledge and understanding:

- 3. Students will be able to apply theoretical concepts of planning, organizing and managing projects.
- 4. By means of exercises performed in the computer laboratory, the student will be able to use software tools like Microsoft Project, which is one of the most used tools of local companies.

 Making judgements
- 5. The students are able to interpret Key Performance Indicators of project management to understand if projects are over, under or on budget and time.

Communication skills:

6. Ability to structure and prepare a presentation describing project management concepts with business language

Ability to learn:

7. Ability to autonomously extend the knowledge acquired during the study course in different industrial contexts

Module 2 - Process and Technology Management

Knowledge and understanding:

- 8. The students will understand the issues related to the process identification, modelling and redesign and will know the basic and most common methods used in process management
- 9. The students will know various methods used for the technology management and foresight
- 10. The students will understand how firms can rely on external collaboration to innovate

Applying knowledge and understanding:

11. Students will be able to apply theoretical concepts of process management and to use BPMN tools for the process description and modelling

	12. Students will learn how to apply theoretical models of technology foresight and to implement complex technology foresight methods like T-start and scenario planning
	Making judgments: 13. Students will be able to transfer the knowledge and methods learned to real practical applications 14. Students will be able to describe processes in a way that allows to find their criticalities and to redesign them 15. Students will be able to recognize consciously the technological positioning of a company and to find options for its development and improvement, using technology foresight
	Communication skills: 16. Students will be able to present process analyses and technology roadmaps 17. Students will be able to interact in a competent and professional way in complex, multi-participants workshops like the ones used in T-plan and scenario planning methods
	Ability to learn: 18. Students will be able to autonomously extend the knowledge acquired during the study course by reading and understanding.
Obiettivi formativi specifici e risultati di apprendimento attesi (ulteriori info.)	
Modalità di esame	Module 1: Written exam: 2 hours; ILOs assessed: 1,2,3,4,5; Presentation case study: 15 minutes per student group; ILOs assessed: 5, 6, 7;
	Module 2: Written exam (1 exercise & 3 questions): 1,5 hours; ILOs assessed: 8 - 18; Case study (modelling and re-design): BPMN models + 1 page report; ILOs assessed: 8, 11, 13, 18.
Criteri di valutazione	Assessment language: English Project Management – Module 1:
Citerial valutazione	Project Planagement Produce 1.

	The grade is calculated from the results of the written exam and the case study (exercise part). The theoretical part counts 50%
	and the exercise part counts 50% of the final grade.
	Process and Technology Management – Module 2: The grade is based on a written exam with exercises and
	theoretical questions and on a case study (on process modelling
	and re-design). The written exam counts 80%, and the case study
	(modelling and re-design) 20% of the final grade.
	The assessment is based on ability to solve exercises about the
	topics of the course (process mapping and re-organization and
	technology roadmapping), clarity of answers, mastery of language
	(also with respect to teaching language), ability to summarize and
	establish relationships between topics.
	Final grade:
	Average of Module 1 and Module 2.
Bibliografia obbligatoria	Module 1
	Lecture notes and documents for exercises will be available on the Microsoft Teams group of the module.
	Module 2
	Lecture elides and notes will be evailable in the OLE page of the
	Lecture slides and notes will be available in the <u>OLE page</u> of the module (self-enrollment key will be provided to students in the first lecture).
