

Syllabus

Kursbeschreibung

Titel der Lehrveranstaltung	Advanced Applications of Building Physics
Code der Lehrveranstaltung	45506
Zusätzlicher Titel der	
Lehrveranstaltung	
Wissenschaftlich-	ING-IND/11
disziplinärer Bereich	
Sprache	Englisch
Studiengang	Master in Energie-Ingenieurwissenschaften
Andere Studiengänge (gem. Lehrveranstaltung)	
Dozenten/Dozentinnen	Prof. Andrea Gasparella,
	andrea.gasparella@unibz.it
	https://www.unibz.it/en/faculties/engineering/academic-
	staff/person/30619
Wissensch.	
Mitarbeiter/Mitarbeiterin	
Semester	Zweites Semester
Studienjahr/e	1
KP	9
Vorlesungsstunden	56
Laboratoriumsstunden	30
Stunden für individuelles	139
Studium	
Vorgesehene Sprechzeiten	
Inhaltsangabe	Learning objective of the course:
	1. mastering the most important concepts about heat and mass
	transfer through the building envelope and the corresponding
	equations
	2. mastering the most important concepts about environmental
	comfort and indoor air quality and their quantitative expressions

	3. applying these concepts to the calculation and simulation of components and buildings4. applying numerical and analytical approaches to the design of
	building envelope structures
	4. understanding and using building simulation
Themen der	Psychrometrics:
Lehrveranstaltung	Fundamentals of thermodynamics of moist air. Relevant quantities and processes. Psychrometric diagrams.
	Modeling:
	Introduction to modelling. Finite difference approaches and characterization.
	Building Energy Balance:
	Steady state and dynamic calculations of the heating and cooling
	peak load and energy need profiles of a building.
	Air node heat balance. Surface balance and terms: conduction,
	convection, radiation (long and short wave), gains, infiltration and
	ventilation. Unsteady state conduction. Numerical solution.
	Dynamic transfer properties. Long wave radiation. Radiosity network. Radiant gains. Solar radiation. Radiosity network. Solar
	gains.
	Moisture migration:
	Heat and mass transfer through building structures, interstitial and
	surface condensation. Moisture verifications and appropriate design
	practices.
	Environmental quality:
	Energy balance of human body, sensible and latent heat
	exchanges with the environment, thermal comfort, relevant factors
	affecting comfort in winter and summer, evaluation indices,
	effective temperature. Indoor air quality and evaluation indexes. Measurement and instruments.
	European and international standards:
	Contents and application of the European and international

standards about the calculation of energy use for space heating

and cooling and the energy performance of buildings.

Stichwörter	Building Physics; Building Energy Balance; Indoor Environmental
	Quality; Thermal Comfort; Indoor Air Quality
Empfohlene	
Voraussetzungen	
Propädeutische	
Lehrveranstaltungen	
Unterrichtsform	Lectures (blackboard and/or slides) and spreadsheet implementation.
Anwesenheitspflicht	Not mandatory.
Spezifische Bildungsziele	(1) Knowledge and understanding:
und erwartete	- Building energy balance terms
Lernergebnisse	- Building envelope behavior (heat and mass transfer)
	- Occupants' thermal comfort
	- Indoor air quality
	(2) Applying Knowledge and understanding:
	- Solving the main energy balance calculation aspects and using
	simulation
	- Calculating heat and mass transfer in building components
	- Assessing thermal comfort
	- Sizing ventilation systems
	(3) Making judgments:
	- Comparing different building envelope configuration and
	contrasting their performance
	- Optimizing the envelope design as for heat and mass transfer
	- Assessing thermal comfort and making decisions about
	improvement strategies
	- Assessing and improving indoor air quality
	(4) Communication skills:
	- Using the appropriate technical vocabulary related to the topic
	- Preparing a report representing and summarizing complex
	results and providing appropriate interpretation
	(5) Learning skills
	- Decomposing a complex problem into sub-problems, finding
	the analytical expression and the numerical solution
	- Comparing different methods and sources

	- Consulting technical standards and keeping up to date with regulation.
Spezifisches Bildungsziel und erwartete Lernergebnisse (zusätzliche Informationen)	Tegulation.
Art der Prüfung	Case study project (report discussion) and oral exam on the different topics of the course. - Formative assessment: Development of the case-study project during the course; ILOs assessed: (2), (3), (5); - Summative assessment: 50% project work presentation: 20 min x 3 times; ILOs assessed: (2), (3), (4); 50% oral examination including discussion of the report: about 1 hour; ILOs assessed: all except (5).
Bewertungskriterien	Marks are attributed according to the following assessment aspects: - Synthesis ability to explain the fundamental aspects of the problem (0= nothing, 1= insufficient; 2=sufficient; 3 = full) - Analysis ability to describe details and specific formulas/models (0= nothing, 1= insufficient; 2=sufficient; 3 = full) - Application ability to implement the principles and formulas and to solve practical cases (0= nothing, 1= insufficient; 2=sufficient; 3 = full) - Reporting ability to represent and summarize the main results and to provide an appropriate interpretation.
Pflichtliteratur	Teaching material, handouts, booklets from the reserve collection

Hens, 2012, Building Physics: Heat, Air and Moisture, Fundamentals and Engineering Methods with Examples and Exercises, Second Edition Carl-Eric Hagentoft, 2001, Introduction to Building Physics, Professional Pub Service ASHRAE, HANDBOOKS - Vol. 1-4 ed. ASHRAE 2009-2012. (UNI) EN ISO 52016-1, 13791 and other relevant UNI EN ISO standards.
Weitere Informationen	Connections with other courses.

	The course "Advanced Applications of Building Physics" introduces several building physics topics necessary for a more comprehensive and effective understanding of other courses related to building energy efficiency (i.e., "Building HVAC Systems" and "Special Issues of Building Physics").
	Professional applications of the covered topics: The topics presented in this course can be applied in all those professional activities involving the design and the re-design of the building system, such as those performed in building engineering offices and companies, as well as for the assessment of energy performance and indoor environmental quality of the built environment.
Ziele für nachhaltige Entwicklung (SDGs)	Gesundheit und Wohlergehen, Maßnahmen zum Klimaschutz, Nachhaltige Städte und Gemeinden, Bezahlbare und saubere Energie
