Syllabus

Kursbeschreibung

Titel der Lehrveranstaltung	Software as a Research Contribution (seminar)
Code der Lehrveranstaltung	71077
Zusätzlicher Titel der Lehrveranstaltung	
Wissenschaftlich-disziplinärer Bereich	INFO-01/A
Sprache	Englisch
Studiengang	Doktoratsstudium in Informatik
Andere Studiengänge (gem. Lehrveranstaltung)	
Dozenten/Dozentinnen	Prof. Dr. Andrea Alexander Janes, Andrea.Janes@unibz.it https://www.unibz.it/en/faculties/engineering/academic-staff/person/2237 Dr. Eduardo Martins Guerra, Eduardo.MartinsGuerra@unibz.it https://www.unibz.it/en/faculties/engineering/academic-staff/person/43879
Wissensch. Mitarbeiter/Mitarbeiterin	
Semester	Erstes Semester
Studienjahr/e	2025-2026
KP	3
Vorlesungsstunden	30
Laboratoriumsstunden	0
Stunden für individuelles Studium	45
Vorgesehene Sprechzeiten	
Inhaltsangabe	The goal of this module is to present how the software produced as part of their research projects can also be a relevant research contribution. Students will acquire skills and competencies related

	to how to share and structure their code in a way that it could be reused in the future in other studies. The students are exposed to techniques for development an open-source community around the software, to improve the software maintainability, to identify possible hot-spots to make the software extensible, and to use good practices for software documentation. These topics will be complemented with discussions of the importance of these properties for reproducibility. Finally, it will also present the format used in conference tracks and Journals focused on software tools, explaining how the students can publish this kind of result.
Themen der Lehrveranstaltung	- Open-source software - Concepts of software maintainability - Clean code - Refactoring and automated testing - Software documentation practices - Software role in studies reproducibility - How to report Software as a research contribution in tracks dedicated to software tools
Stichwörter	Research software, Licenses, Patents, Reusability, Reproducibility, Documentation.
Empfohlene Voraussetzungen	
Propädeutische Lehrveranstaltungen	
Unterrichtsform	Frontal lectures, exercises; team and/or individual projects.
Anwesenheitspflicht	Compulsory
Spezifische Bildungsziele und erwartete Lernergebnisse	Knowledge and understanding • To have a thorough knowledge of the fundamental techniques for software maintainability • To have a thorough knowledge of how to prepare your software to be reused in future studies. Applying knowledge and understanding • Be able to apply principles of Clean Code to improve the internal software quality. • Be able to apply refactoring and automated testing as a mean to keep the code maintainable.

	Making judgments • Be able to make design decisions to modularize parts of the software that might be replaced in future studies. • Be able to choose the best approach to document the software developer as part of a research study. Communication skills • Present and share the software in as open-source project that can attract contributors. • Present the software in publications to tracks dedicated to software tools Learning skills • Have developed learning skills to extract information of existing projects targeting their reuse.
Spezifisches Bildungsziel und erwartete Lernergebnisse (zusätzliche Informationen)	
Art der Prüfung	The assessment is based on assignments done by students related to the content of the course.
Bewertungskriterien	The student's grade is calculated based on the average grade from the course assignments.
Pflichtliteratur	The course will be based on lecture notes.
