Syllabus

Descrizione corso

Titolo insegnamento	Software as a Research Contribution (seminar)
Codice insegnamento	71077
Titolo aggiuntivo	
Settore Scientifico-Disciplinare	INFO-01/A
Lingua	Inglese
Corso di Studio	Corso di Dottorato di ricerca in Scienze e Tecnologie informatiche
Altri Corsi di Studio (mutuati)	
Docenti	prof. dr. Andrea Alexander Janes, Andrea.Janes@unibz.it https://www.unibz.it/en/faculties/engineering/academic-staff/person/2237 dr. Eduardo Martins Guerra, Eduardo.MartinsGuerra@unibz.it https://www.unibz.it/en/faculties/engineering/academic-staff/person/43879
Assistente	
Semestre	Primo semestre
Anno/i di corso	2025-2026
CFU	3
Ore didattica frontale	30
Ore di laboratorio	0
Ore di studio individuale	45
Ore di ricevimento previste	
Sintesi contenuti	The goal of this module is to present how the software produced as part of their research projects can also be a relevant research contribution. Students will acquire skills and competencies related to how to share and structure their code in a way that it could be reused in the future in other studies. The students are exposed to techniques for development an open-source community around the

	software, to improve the software maintainability, to identify possible hot-spots to make the software extensible, and to use good practices for software documentation. These topics will be complemented with discussions of the importance of these properties for reproducibility. Finally, it will also present the format used in conference tracks and Journals focused on software tools, explaining how the students can publish this kind of result.
Argomenti dell'insegnamento	- Open-source software - Concepts of software maintainability - Clean code - Refactoring and automated testing - Software documentation practices - Software role in studies reproducibility - How to report Software as a research contribution in tracks dedicated to software tools
Parole chiave	Research software, Licenses, Patents, Reusability, Reproducibility, Documentation.
Prerequisiti	
Insegnamenti propedeutici	
Modalità di insegnamento	Frontal lectures, exercises; team and/or individual projects.
Obbligo di frequenza	Compulsory
Obiettivi formativi specifici e risultati di apprendimento attesi	Knowledge and understanding • To have a thorough knowledge of the fundamental techniques for software maintainability • To have a thorough knowledge of how to prepare your software to be reused in future studies. Applying knowledge and understanding • Be able to apply principles of Clean Code to improve the internal software quality. • Be able to apply refactoring and automated testing as a mean to keep the code maintainable. Making judgments • Be able to make design decisions to modularize parts of the software that might be replaced in future studies. • Be able to choose the best approach to document the software developer as part of a research study.

	Communication skills • Present and share the software in as open-source project that can attract contributors. • Present the software in publications to tracks dedicated to software tools Learning skills • Have developed learning skills to extract information of existing projects targeting their reuse.
Obiettivi formativi specifici e risultati di apprendimento attesi (ulteriori info.)	
Modalità di esame	The assessment is based on assignments done by students related to the content of the course.
Criteri di valutazione	The student's grade is calculated based on the average grade from the course assignments.
Bibliografia obbligatoria	The course will be based on lecture notes.
Bibliografia facoltativa
