

Syllabus

Kursbeschreibung

Titel der Lehrveranstaltung	Electrical Systems Engineering
Code der Lehrveranstaltung	45500
Zusätzlicher Titel der Lehrveranstaltung	
Wissenschaftlich-disziplinärer Bereich	IIND-08/B
Sprache	Englisch
Studiengang	Master in Energie-Ingenieurwissenschaften
Andere Studiengänge (gem. Lehrveranstaltung)	
Dozenten/Dozentinnen	Dr. Vincenzo Trovato, Vincenzo.Trovato@unibz.it https://www.unibz.it/en/faculties/engineering/academic-staff/person/46153
Wissensch. Mitarbeiter/Mitarbeiterin	
Semester	Erstes Semester
Studienjahr/e	1
KP	6
Vorlesungsstunden	60
Laboratoriumsstunden	2
Stunden für individuelles Studium	88
Vorgesehene Sprechzeiten	
Inhaltsangabe	Initially the course refers to elements of general electrotechnics. Then the symbolic notation is introduced for the study of sinusoidal networks: complex operators; behaviour of the bipoles in sinusoidal and three-phase systems. The emphasis is put on electrical installations (structure of the Italian electricity system; structure of electrical networks; generation, transmission, distribution and final use of electricity).

	<p>Furthermore, the criteria for the design of DC power lines is examined (cantilevered power lines; sizing of lines with constant section or constant current density).</p> <p>The main constructive characteristics of single-phase and three-phase transformers are also examined (magnetic cores and electric coils; real transformer; losses due to the Joule effect and iron losses due to hysteresis and eddy currents).</p> <p>The theory of symmetrical components for the understanding and analysis of non-symmetrical three-phase electrical faults is addressed.</p> <p>Finally, the effects of electricity on the human body are examined, the components of a grounding system and protection against indirect electrical contacts.</p>
Themen der Lehrveranstaltung	<ol style="list-style-type: none"> 1. Definitions and generality 2. Sinusoidal quantities 3. Three-phase systems 4. Networks structure 5. Sizing of continuous and alternating power lines 6. Transformers 7. Non-symmetrical electrical networks 8. Fault analysis 9. Electrical safety
Stichwörter	Three-phase systems; Continuous and alternating power lines; Transformers; Fault analysis; Electrical safety
Empfohlene Voraussetzungen	Mathematical analysis, Physics 2, Electrotechnics.
Propädeutische Lehrveranstaltungen	
Unterrichtsform	Class lectures.
Anwesenheitspflicht	Not mandatory.
Spezifische Bildungsziele und erwartete Lernergebnisse	<ul style="list-style-type: none"> • Obtain working knowledge in electrical systems • Understand the current and future electricity scenarios • Learn how to make comparisons among different technologies and solutions based on multiple aspects • Master the main theoretical background in power systems design <p>The learning outcomes need to refer to the Dublin Descriptors:</p>

	<p>Knowledge and understanding</p> <p>1. Knowledge of the basics related to the transmission and distribution of electricity and the main criteria to design electric lines, basics on transformers, line faults and electric safety.</p> <p>Applying knowledge and understanding</p> <p>2. Students will be able to approach the design of direct current and alternating current lines, with a basic understanding on how to select the proper circuit protection. Recognize the different voltage level associated with electricity transmission and evaluate the main issues related to the distribution of electricity. A basic knowledge of CEI regulations is also provided.</p> <p>Making judgements</p> <p>3. Students will be able to interpret design choices on existing systems, and to identify and investigate critical aspects related with them.</p> <p>Communication skills</p> <p>4. Students will learn the main technical terms related to the topic.</p> <p>Ability to learn</p> <p>5. The variety of topics of the course allow the students to have basic knowledge of many subjects, giving them the opportunity to easily deepen specific topics.</p>
Spezifisches Bildungsziel und erwartete Lernergebnisse (zusätzliche Informationen)	
Art der Prüfung	- Summative assessment: 100% oral examination with two or three questions: about ½ hour; ILOs assessed: all.
Bewertungskriterien	A single final mark will be calculated averaging the marks of two/three questions. All marks must be at least 18. Evaluation based on knowledge of the subject and ability to do connections between the various course topics.

Pflichtliteratur	Lessons and slides of the course.
