

# Syllabus

## *Descrizione corso*

<b>Titolo insegnamento</b>	Building HVAC Systems
<b>Codice insegnamento</b>	45528
<b>Titolo aggiuntivo</b>	
<b>Settore Scientifico-Disciplinare</b>	IIND-07/B
<b>Lingua</b>	Inglese
<b>Corso di Studio</b>	Corso di laurea magistrale in Ingegneria energetica
<b>Altri Corsi di Studio (mutuati)</b>	
<b>Docenti</b>	<p>ing. Alessandro Prada,  Alessandro.Prada@unibz.it  <a href="https://www.unibz.it/en/faculties/engineering/academic-staff/person/32626">https://www.unibz.it/en/faculties/engineering/academic-staff/person/32626</a></p> <p>dr. Vittoria Benedetti,  Vittoria.Benedetti@unibz.it  <a href="https://www.unibz.it/en/faculties/engineering/academic-staff/person/36228">https://www.unibz.it/en/faculties/engineering/academic-staff/person/36228</a></p>
<b>Assistente</b>	
<b>Semestre</b>	Secondo semestre
<b>Anno/i di corso</b>	1
<b>CFU</b>	9
<b>Ore didattica frontale</b>	90
<b>Ore di laboratorio</b>	0
<b>Ore di studio individuale</b>	135
<b>Ore di ricevimento previste</b>	
<b>Sintesi contenuti</b>	<p>This course comprises hours of lectures and practical design applications. In the initial part, students will focus on determining heating loads and ensuring occupant comfort to accurately size HVAC systems for buildings. Following this, they will learn to prepare a building's energy balance by technical standards. The course will then cover various types of HVAC systems, including all-</p>

	<p>water, mixed air-water, and all-air systems. The fundamentals of HVAC design will be outlined in the concluding part of the course. Additionally, students will complete a design project, such as developing an HVAC system for a building.</p>
<b>Argomenti dell'insegnamento</b>	<p>Heating Design Load Calculation:</p> <ul style="list-style-type: none"> <li>• Heating load calculations</li> <li>• Natural and mechanical ventilation</li> <li>• User profiles and operation schedules</li> <li>• Occupant comfort and health</li> </ul> <p>Energy Balance of a Building:</p> <ul style="list-style-type: none"> <li>• Preparation of a building's energy balance</li> <li>• Heat losses due to transmission and ventilation</li> <li>• Effects of solar radiation</li> <li>• Heat gains</li> <li>• HVAC systems efficiency</li> <li>• Basics of energy performance evaluation and certification</li> </ul> <p>Domestic Hot Water System:</p> <ul style="list-style-type: none"> <li>• Energy needs</li> <li>• System design and integration</li> </ul> <p>HVAC Systems:</p> <ul style="list-style-type: none"> <li>• Design of heating, cooling, ventilation, and air conditioning systems</li> <li>• Hydronics, all-air, and mixed air/water systems</li> <li>• Distribution networks (piping and air ducts)</li> <li>• Terminal units and heat recovery equipment</li> <li>• Equipment for heating and cooling, including boilers, unitary air conditioners, water chillers, storage tanks, and circulation pumps</li> <li>• Renewable energy equipment such as thermal solar panels and heat pumps</li> <li>• Equipment operating curves and partial load operation</li> <li>• Safety devices and an introduction to safety standards.</li> </ul>
<b>Parole chiave</b>	<p>HVAC, Energy Efficiency, Renewable Energy, Building Simulation, Design Load</p>
<b>Prerequisiti</b>	<p>All students officially enrolled in the first year of the master's Program in Energy Engineering are eligible to take this course. Exceptional cases should be discussed with the instructor.</p>

	<p>It is recommended that students also attend the "Applied Energetics" course.</p> <p>This course covers the engineering applications of topics studied in "Applied Energetics" and "Advanced Applications of Building Physics" (concurrent enrolment in "Advanced Applications of Building Physics" is advised). Additionally, there are connections with the "Special Issues of Building Physics" course.</p>
<b>Insegnamenti propedeutici</b>	
<b>Modalità di insegnamento</b>	<p>Class lectures will be conducted using a combination of blackboard instruction and slide presentations, supplemented by design exercises utilizing spreadsheets and building simulation software (e.g., EnergyPlus, Trnsys). All lecture materials will be made available for students to download via Teams.</p> <p>In addition to attending classes, students will be required to work in teams to prepare a report on the design, sizing, and performance evaluation of a basic HVAC system.</p>
<b>Obbligo di frequenza</b>	Strongly recommended.
<b>Obiettivi formativi specifici e risultati di apprendimento attesi</b>	<p>Knowledge and understanding:</p> <p>By the end of the course, students should be able to:</p> <ol style="list-style-type: none"> <li>1. Master key concepts related to heating and cooling loads and the overall energy performance of buildings.</li> <li>2. Understand the operation and functionality of various HVAC systems.</li> <li>3. Acquire knowledge on the content of the main technical standards on the topics currently in force.</li> </ol> <p>Applying Knowledge and Understanding:</p> <ul style="list-style-type: none"> <li>• Apply the learned concepts to the practical design and implementation of HVAC systems.</li> </ul> <p>Making Judgments:</p> <ul style="list-style-type: none"> <li>• Assess the heating and cooling loads of buildings, evaluate HVAC system performance, and analyze the energy usage of buildings.</li> </ul> <p>Communication Skills:</p> <ul style="list-style-type: none"> <li>• Effectively convey engineering concepts using technical</li> </ul>

	<p>drawings and reports.</p> <p>Learning Skills:</p> <ul style="list-style-type: none"> <li>• Self-train and stay current with evolving technical standards and market innovations.</li> </ul>
<b>Obiettivi formativi specifici e risultati di apprendimento attesi (ulteriori info.)</b>	
<b>Modalità di esame</b>	<p>The evaluation comprises two components:</p> <ul style="list-style-type: none"> <li>• Group project: this involves sizing an HVAC system and calculating its energy efficiency and indoor comfort performance.</li> <li>• Individual oral examination: in this segment, the student will discuss his/her design choices and demonstrate his/her theoretical understanding of HVAC systems.</li> </ul> <p>- Formative assessment: Development of the team project: during the course; ILOs assessed: 2, 3, 5.</p> <p>- Summative assessment:</p> <p>50% oral exam, theory: 2 or 3 open-end questions; ILOs assessed: 1,2,3,4;</p> <p>50% project work presentation: Presentation and discussion (30 minutes); ILOs assessed: 3,4,5,6,7,8.</p>
<b>Criteri di valutazione</b>	<p>The coursework will be assessed as follows:</p> <ul style="list-style-type: none"> <li>• HVAC system project work: 50%</li> <li>• Final oral examination: 50%</li> </ul> <p>Completion of the project work is a prerequisite for taking the oral examination.</p>
<b>Bibliografia obbligatoria</b>	<ul style="list-style-type: none"> <li>• EN ISO 12831 and other relevant EN ISO standards (especially the EN ISO 52000 family)</li> <li>• Notes taken during the lessons</li> <li>• W. T. Grondzik. "Air-Conditioning System Design Manual" 2nd ed-, ASHRAE/Butterworth, 2007</li> <li>• J.W. Mitchell and J.E. Braun "Principles of Heating, Ventilation and Air Conditioning in Buildings" Wiley 2013</li> </ul>
<b>Bibliografia facoltativa</b>	<ul style="list-style-type: none"> <li>• ASHRAE, HANDBOOK - Vol. 1-4 ed. ASHRAE 2017-2020 (or other recent editions).</li> <li>• G.F. Hundry, A.R. Trott, and T.C. Welch. "Refrigeration, Air Conditioning and Heat Pumps" 5th ed, Butterworth-Heinemann. 2016</li> <li>• I. Beausoleil-Morrison "Fundamentals of Building</li> </ul>

	<p>Performance Simulation" Routledge. 2021</p> <ul style="list-style-type: none"> <li>• L. Socal and B. Grassi. "Compendium of hydraulics for heating technicians". IVAR 2018</li> <li>• R. McDowall. "Fundamentals of HVAC systems". ASHRAE/Elsevier 2007</li> <li>• R. Montgomery and R. McDowall. "Fundamentals of HVAC Control Systems". ASHRAE/Elsevier 2007</li> </ul>
<b>Altre informazioni</b>	<p>Connections with other courses:</p> <p>The course "Building HVAC Systems" is strictly integrated with the course "Advanced Applications of Building Physics" and presents connections also with the course "Special Issues of Building Physics" and the module "Solar Energy Systems" part of the course "Solar Energy and Smart Water Systems".</p> <p>Professional applications of the covered topics:</p> <p>The topics presented in this course can be applied in all those professional activities involving the design and the re-design of the building system, such as those performed in building engineering offices and companies, and can be of particular interest in the framework of building voluntary rating systems and minimum environmental criteria for buildings.</p>
<b>Obiettivi di Sviluppo Sostenibile (SDGs)</b>	<p>Energia rinnovabile e accessibile, Lotta contro il cambiamento climatico, Città e comunità sostenibili</p>
