

Syllabus

Kursbeschreibung

Titel der Lehrveranstaltung	Fluid Machines Engineering
Code der Lehrveranstaltung	45527
Zusätzlicher Titel der Lehrveranstaltung	
Wissenschaftlich- disziplinärer Bereich	ING-IND/08
Sprache	Englisch
Studiengang	Master in Energie-Ingenieurwissenschaften
Andere Studiengänge (gem. Lehrveranstaltung)	
Dozenten/Dozentinnen	Prof. Lorenzo Battisti, Lorenzo.Battisti@unibz.it https://www.unibz.it/en/faculties/engineering/academic- staff/person/32901
Wissensch. Mitarbeiter/Mitarbeiterin	
Semester	Erstes Semester
Studienjahr/e	1
KP	9
Vorlesungsstunden	90
Laboratoriumsstunden	0
Stunden für individuelles Studium	135
Vorgesehene Sprechzeiten	
Inhaltsangabe	To master the most important concepts about fluid machines dedicated to energy conversion systems and their integration in the energetic system, to give decision tools and criteria for design, cost analysis, efficiency analysis and selection with emphasis to community and small-scale plants.
Themen der	The course will cover the following topics:

Lehrveranstaltung

- 1. Introduction
- a. Essentials of fluid Machines and Energy systems
- i. Elements of fluid dynamics
- ii. Elements of Fluid Machinery
- iii. Elements of Energy systems
- b. Introduction to renewable energy
- 2. Fluid machines for renewable energy
- a. Solar Power
- Solar Resource
- ii. Solar photovoltaic
- iii. Concentrated and thermodynamic solar
- iv. Utility and community scale
- b. Hydro Power
- i. Hydro Resource
- ii. Mini-hydro
- iii. Reversible turbines, PATs and variable speed hydro-turbines
- iv. Utility and community scale
- v. Diagnostics and fault detection
- c. Wind Power
- i. Wind resource and Terrain
- ii. Horizontal and vertical axis wind turbines
- iii. Utility and community scale
- iv. Diagnostics and fault detection
- d. Waste Heat and Water
- i. Waste Heat
- ii. Waste Water
- e. Storages
- i. Types of storage
- ii. P2X
- iii. Hydrogen Applications
- iv. Utility and community scale
- f. Grid Management & Economics
- i. Smart Grids
- ii. Economic figures: LCA, ELCA, PBP, LCOE

For each of the technologies presented in the course, the tools needed for the performance evaluation (power, work, efficiency, ...) will be defined. For some of the proposed technologies, a

techno-economic analysis will be carried out as well.

Stichwörter	Fluid Machinery; Hydro Power; Turbines; Wind Power; Storages
Empfohlene Voraussetzungen	Fluid Machines, Thermodynamics, Mechanics.
Propädeutische Lehrveranstaltungen	
Unterrichtsform	Frontal lessons, laboratory and exercises.
Anwesenheitspflicht	Recommended.
Spezifische Bildungsziele und erwartete Lernergebnisse	During the course, the student will gain knowledge about: 1. Key energy production, storage, transmission and utilisation technologies, including their cost and sustainability aspects over their life cycle 2. How to evaluate the technical characteristics and resources of some of the major renewable power sources and the performance of energy systems and machines related. 3. Develop preliminary design and dimensioning for wind, solar, hydro and hydrogen systems and perform preliminary technology assessment for unconventional energy resources (e.g., Waste Heat).
Spezifisches Bildungsziel	1. Knowledge and understanding
und erwartete	Demonstrates advanced knowledge of fluid machinery and energy
Lernergebnisse (zusätzliche Informationen)	conversion systems, including governing equations of pVT systems and fluid machineries. Understand the operating characteristics of fluid machineries. Know and understand the efficiency in elementary and complex systems.
	 Applying knowledge and understanding Applies analytical and numerical methods to model pVT systems. Is able to design and select basic fluid machinery systems. Making judgements Makes informed decisions on the design and operation of fluid machinery in energy systems, considering operating parameters and efficiency. Critically evaluates data from experiments and simulations and assesses uncertainties. Communication skills
	Presents complex technical analyses clearly and effectively to specialist audiences, using appropriate technical language,

	graphical representations, and scientific reporting standards. Shows the capability to appropriately use technical terms.
	5. Learning skills Works independently and collaboratively, identifies learning needs, and updates knowledge in response to technological advances in turbomachinery and energy engineering. Prepares for further research or professional practice.
Art der Prüfung	Written/Oral Exam and exercise report.
	Knowledge and understanding> Oral examination, At-home exercises
	2. Applying knowledge and understanding> Lab group exercises, At-home exercises
	3. Making judgements> Lab group reports, Oral examination4. Communication skills> Lab group reports/presentations, Oral examination
	5. Learning skills> At-home exercises, Lab teamwork, Oral examination
Bewertungskriterien	Oral exam performance and exercises reports assignments performance will be equally weighted for course final grade.
Pflichtliteratur	Notes of the course.
