

Syllabus

Descrizione corso

Titolo insegnamento	Electric Power Conversion Equipment
Codice insegnamento	45511
Titolo aggiuntivo	
Settore Scientifico- Disciplinare	ING-IND/32
Lingua	Inglese
Corso di Studio	Corso di laurea magistrale in Ingegneria energetica
Altri Corsi di Studio (mutuati)	LM-33 Industrial Mechanical Engineering (code: 47558)
Docenti	
Assistente	
Semestre	Secondo semestre
Anno/i di corso	1
CFU	6
Ore didattica frontale	36
Ore di laboratorio	24
Ore di studio individuale	90
Ore di ricevimento previste	
Sintesi contenuti	The course discusses the theoretical basis and the practical applications of electrical energy conversion (electrical-to-electrical and electro mechanical), with a special focus on electrical machines and their control. The main conversion topologies are introduced and studied. Practical aspects and applications will be considered, highlighting the advantages achievable with state of the art technologies.
Argomenti dell'insegnamento	 The course covers the following topics: Recalling electrical engineering, including electric and magnetic circuits, principles and main laws. Introduction to motion control, motor-load dynamic, motion trajectories, overview of components of an electric drive.

	Electro-mechanical conversion, actuators, rotating electrical
	machines, main terminology and industrial standards
	DC motor: operating principles, main features and
	construction, mechanical characteristics, exercises.
	DC motor control: recalling control theory, including Laplace
	transforms, block schemes, nested loops, current and speed loops,
	choice of PI parameters, exercises
	Static conversion using power electronics: generalities, H
	bridge, 2- and 3- levels modulation, current ripple.
	Matlab-Simulink: implementation of DC motor control block
	scheme
	Brushless synchronous motors: operating principles, main
	features, DC vs. AC brushless motors
	• AC brushless motor control: a-ß and d-q transforms (Park and
	Clark transforms), operating limits, maximum-torque-per-ampere
	(MTPA) and maximum-torque-per-voltage (MTPV) strategies.
Parole chiave	
Prerequisiti	Electrotechnics.
Insegnamenti propedeutici	
Modalità di insegnamento	Frontal lectures, exercises in lab.
Obbligo di frequenza	Not mandatory.
Obiettivi formativi specifici e	(1) Knowledge and understanding:
risultati di apprendimento	Master the most important concepts about electro-mechanical
attesi	energy conversion, static conversion, and electrical machines and
	drives for different applications.
	(2) Applying knowledge and understanding:
	Verification of the requirements of an electric drive and
	understanding of real world operations of electric drives in different
	application fields.
	(3) Making judgments:
	The ability to select the more adequate electric drive (and its
	components) for a certain application.
	(4) Communication skills:
	Acquisition of field-related technical terminology.
	Ability to describe the state of the art of the technology adopted in
	, and the second of the second

	energy conversion systems. Ability to present the acquired knowledge and competences with a proper language
	(5) Learning skills: Improvement in the ability to autonomously extend the knowledge acquired during the study course, by reading and understanding scientific and technical documentation.
Obiettivi formativi specifici e risultati di apprendimento attesi (ulteriori info.)	
Modalità di esame	 Formative assessment: In class with written exercises and using Simulink (assessment of ILOs 1, 2, 5). Summative assessment: The assessment of the course consists of two parts: Written examination on basic electric circuits, La Place transforms, DC motor, AC brushless motors. Eventual oral examination: assessed through questions relative to theoretical aspects. All ILOs except the number 5 are assessed in the summative assessment.
Criteri di valutazione	The Final grade will take into account both the marks obtained in the two parts of the overall assessment. The following aspects will be considering in the evaluation: Written examination: clarity and correctness of answers, ability to summarize and evaluate results, presentation quality Oral examination: clarity and correctness of answers with proper language, ability to summarize and evaluate results, presentation quality, problem solving ability, skills in critical thinking.
Bibliografia obbligatoria	Lecture notes and documents for exercise will be available on Teams and the reserve collections. There is no single textbook covering the entire course content. The material is collected from various sources.
Bibliografia facoltativa	Shaahin Filizadeh. Electric Machines and Drives: Principles, control, modelling and simulation. CRC Press.
