Syllabus

Kursbeschreibung

Titel der Lehrveranstaltung	Computer Networks
Code der Lehrveranstaltung	76207
Zusätzlicher Titel der Lehrveranstaltung	
Wissenschaftlich-disziplinärer Bereich	IINF-05/A
Sprache	Italienisch
Studiengang	Bachelor in Informatik
Andere Studiengänge (gem. Lehrveranstaltung)	
Dozenten/Dozentinnen	dr. Florian Hofer, Florian.Hofer@unibz.it https://www.unibz.it/en/faculties/engineering/academic-staff/person/37220
Wissensch. Mitarbeiter/Mitarbeiterin	
Semester	Erstes Semester
Studienjahr/e	3
KP	6
Vorlesungsstunden	40
Laboratoriumsstunden	20
Stunden für individuelles Studium	90
Vorgesehene Sprechzeiten	
Inhaltsangabe	– Introduction to computer networks – ISO OSI reference model – Internet applications and application protocols (HTTP, SMTP, DNS) – Network protocols: TCP/IP, Ethernet – Sockets and RPCs – Failure robustness, security

Themen der Lehrveranstaltung	This course aims at providing a solid background in computer networks. Theory will be intertwined with discussions about how the notions introduced are exploited in practice, taking the Java framework as reference. This will allow to see in real contexts why distributed systems are important.
Stichwörter	Internet, TCP/IP, Networks, Protocols
Empfohlene Voraussetzungen	The course requires basic knowledge of data structures and algorithms, as well as foundational Java programming skills.
Propädeutische Lehrveranstaltungen	
Unterrichtsform	The course includes frontal lectures and lab exercises.
Anwesenheitspflicht	Not compulsory, but recommended
Spezifische Bildungsziele und erwartete Lernergebnisse	Knowledge and Understanding – D1.11 Know in detail the principles of computer networks and distributed systems – D1.12 Know in detail the internet fundamental principles and the methodologies for their design and development. Applying knowledge and understanding – D2.9 Be able to plan and program in distributed programming environments and in digital networks. Ability to make judgments – D3.1 Be able to collect and interpret useful data and to judge information systems and their applicability. – D3.2 Be able to work autonomously according to the own level of knowledge and understanding. Communication skills – D4.1 Be able to use one of the three languages English, Italian and German, and be able to use technical terms and communication appropriately. – D4.2 Be able to use modern communication systems, even at a distance. Learning skills – D5.1 Have developed learning capabilities to pursue further studies with a high degree of autonomy. – D5.3 Be able to follow the fast technological evolution and to learn cutting edge IT technologies and innovative aspects of last generation information systems.
Spezifisches Bildungsziel	

und erwartete Lernergebnisse (zusätzliche Informationen)	
Art der Prüfung	The assessment consists of an oral exam (D1.11, D1.12, D4.1, D5.1, D5.3) and lab reports, which contain practical excercises (D1.11, D1.12, D2.9, D4.1, D4.2) and project work (D2.9, D3.1, D3.2, D4.2, D5.1).
Bewertungskriterien	Marks are distributed as follows: 30% for the lab reports and 70% for the oral exam. Attending the lab is not mandatory but is recommended, as it can help improve the oral exam grade. The final grade is calculated as a weighted average of the lab reports (30%) and the oral exam (70%). However, the lab report marks are considered only if they are higher than the oral exam grade. The 30% weight for the lab reports applies only if three assignments are submitted; if fewer assignments are delivered, the weight is adjusted proportionally.
