## *Kursbeschreibung*

<b>Titel der Lehrveranstaltung</b>	"Grundlagen der Pflanzenproduktion"
<b>Code der Lehrveranstaltung</b>	40216
<b>Zusätzlicher Titel der Lehrveranstaltung</b>	
<b>Wissenschaftlich-disziplinärer Bereich</b>	NN
<b>Sprache</b>	Englisch
<b>Studiengang</b>	Bachelor in Nachhaltiger Land- und Forstwirtschaft in Berggebieten
<b>Andere Studiengänge (gem. Lehrveranstaltung)</b>	
<b>Dozenten/Dozentinnen</b>	dr. Maria Dolores Asensio Abella, MariaDolores.AsensioAbella@unibz.it <a href="https://www.unibz.it/en/faculties/agricultural-environmental-food-sciences/academic-staff/person/45187">https://www.unibz.it/en/faculties/agricultural-environmental-food-sciences/academic-staff/person/45187</a> Prof. Massimo Tagliavini, Massimo.Tagliavini@unibz.it <a href="https://www.unibz.it/en/faculties/agricultural-environmental-food-sciences/academic-staff/person/209">https://www.unibz.it/en/faculties/agricultural-environmental-food-sciences/academic-staff/person/209</a> dr. Simon Josef Unterholzner, SimonJosef.Unterholzner@unibz.it <a href="https://www.unibz.it/en/faculties/agricultural-environmental-food-sciences/academic-staff/person/41647">https://www.unibz.it/en/faculties/agricultural-environmental-food-sciences/academic-staff/person/41647</a>
<b>Wissensch. Mitarbeiter/Mitarbeiterin</b>	
<b>Semester</b>	Zweites Semester
<b>Studienjahr/e</b>	1
<b>KP</b>	10
<b>Vorlesungsstunden</b>	60
<b>Laboratoriumsstunden</b>	40
<b>Stunden für individuelles Studium</b>	150

<b>Vorgesehene Sprechzeiten</b>	30
<b>Inhaltsangabe</b>	<p>Agricultural Ecology and Principles of Plant Production:</p> <p>Agrometeorology</p> <p>Soil (physical aspects)</p> <p>Crop productivity</p> <p>Interactions crops-physical environment-organisms (e.g. competitions)</p> <p>Crop (monoculture, rotation, intercropping,...) and farming systems (organic, regenerative, agroecology,...)</p> <p>Management criteria (seed bed preparation, water/ nutrient supply, management of residues, ...)</p> <p>Plant genetics:</p> <p>Classical genetics &amp; molecular basics</p> <p>Regulation of gene expression</p> <p>Population genetics</p> <p>Plant breeding</p> <p>Biotechnology</p> <p>Functional genetics</p> <p>Developmental genetics</p>
<b>Themen der Lehrveranstaltung</b>	<p>The course provides the basis for the comprehension of the functioning of agro-ecosystems by explaining the principles of plant productivity and the characteristics of the genetic material. In details, the module Agricultural Ecology and Principles of Plant Production will cover the following topics:</p> <p>Agrometeorology</p> <p>Physical properties of agricultural soils</p> <p>Soil water relations and crop ET</p> <p>Plant photosynthesis, plant growth and development, phenological phases</p> <p>Crop and farming systems</p> <p>Seedbed preparation and cultural management techniques</p> <p>Criteria for managing irrigation, fertilization and weed control.</p> <p>In details, the module Plant Genetics will cover the following topics:</p> <p>Introduction to Plant Genetics</p> <p>Classical Genetics and Mendel's Laws</p> <p>Chromosome Theory</p>

	Molecular Basis of Inheritance Genetic Variability Population Genetics Molecular Biotechnology Functional Genetics Developmental Genetics
<b>Stichwörter</b>	Agrometeorology, Crop productivity, Crop systems, Soil physics, Biotechnology, Plant breeding, Plant genetics,
<b>Empfohlene Voraussetzungen</b>	
<b>Propädeutische Lehrveranstaltungen</b>	no
<b>Unterrichtsform</b>	The course combines lectures, field visits, field and laboratory exercises.
<b>Anwesenheitspflicht</b>	no
<b>Spezifische Bildungsziele und erwartete Lernergebnisse</b>	<p>Knowledge and Understanding:</p> <p>The degree course provides advanced knowledge for the training of professionals capable of carrying out management and coordination activities in mountain and forestry agriculture, as well as effectively preparing students for possible further studies. All these skills will be transmitted to the graduates by means of face-to-face lecturing, technical and practical laboratory exercises, field exercises and educational-scientific excursions. The elaboration of the experimental thesis may be carried out both in the faculty's laboratories and in companies and local authorities. At the end of their studies, the three-year graduate at Sustainable agriculture and forest management in mountain environment possesses basic knowledge of mathematics, physics, chemistry, statistics, and the biology of plant and animal organisms and microorganisms. The expected learning outcomes can therefore be summarised as:</p> <ul style="list-style-type: none"> <li>- knowledge of the atomic-molecular constitution of bodies and the role of chemical bonds and structure on the properties of materials</li> <li>- understanding of the main chemical and biochemical reactions in plants and soils</li> <li>- an understanding of the fundamental aspects of the biology, physiology and ecology of organisms with particular reference to</li> </ul>

	<p>those of agricultural and forestry interest, including their genetic improvement and relationships with beneficial or pathogenic organisms and micro-organisms</p> <ul style="list-style-type: none"> <li>- being able to read and understand advanced texts relating to the various aspects characterising the agrarian and agro-forestry environment in mountainous areas</li> <li>- being able to communicate and discuss issues relating to the training course in an appropriate manner in the three languages (Italian, English, German).</li> </ul> <p>The knowledge and comprehension skills listed above are achieved through participation in lectures, practical exercises, seminars, and through guided personal and individual study as envisaged by the training activities offered. Some courses in the syllabus may be offered in a dual mode (lectures face-to-face and in video-recorded form and made available on the university intranet platform).</p> <p>The assessment of the achievement of learning outcomes takes place mainly by means of exams and possible in -progress tests. The tests may be written and/or oral, and may also consist of reports and oral presentations of projects or seminars.</p> <p>Ability to apply knowledge and understanding:</p> <p>In addition to acquiring a solid scientific-technological foundation, the ability to tackle new problems, both practical and real, is stimulated, with the aim of enabling the student to acquire a working method. The three-year graduate in sustainable agriculture and forest management in a mountain environment, thanks to a technical-scientific training integrated with economic-managerial subjects, must:</p> <ul style="list-style-type: none"> <li>- know how to set up and manage sustainable agricultural/forestry systems in mountain environmental contexts, based on knowledge of agricultural production systems and their economic and marketing aspects, considering environmental impact, product quality and consumer health.</li> </ul> <p>The ability to apply knowledge is achieved through critical reflection on the texts proposed for individual study stimulated by classroom activities, the study of research and application cases shown by the lecturers, the performance of practical laboratory and field exercises, bibliographical research, individual and/or group projects as part of the fundamental and optional courses included in the teaching plan, as well as during the internship and</p>
--	---

preparation for the final examination. The tests carried out by means of written and/or oral examinations, reports and exercises include the performance of specific tasks in which the student demonstrates mastery of tools, methodologies and critical autonomy. In the internship activities, the verification takes place through the presentation of a report by the student to the teacher of reference.

#### Making judgements:

At the end of their studies, graduates possess an awareness and autonomy of judgement that enable them to acquire the necessary information, and to assess its implications in a production, environmental and market context, to implement interventions to improve the quality, efficiency and sustainability of agricultural/forestry production processes.

Autonomy of judgement is developed and verified through the exercise activities, the organised seminars, the preparation of papers as part of the teaching, as well as during the internship activity and the activity assigned by the lecturer for the preparation of the final examination.

#### Communication skills:

The graduate has the ability to use the most modern and effective means of communication to disseminate the research carried out and the analyses relating to the problems of agro-forestry and forest management; he/she is able to deal with the production realities in the agro-forestry sector and to interact with figures from the sector and related sectors. Communication skills are particularly developed during exercises, the organised seminars, as well as during training activities that also involve the preparation of reports and written documents and the oral presentation of the same.

Since the course is trilingual, graduates are able to communicate correctly, in written and oral form, in Italian and in two other languages (German and English).

In tutorial activities and seminars, students are encouraged to speak publicly in order to improve their ability to describe clearly and comprehensibly any doubts and/or requests for clarification on specific topics. The acquisition and evaluation/verification of the achievement of communication skills are also provided for during

	<p>the internship and the final report, as well as when writing and discussing the final paper.</p> <p>Learning skills: The degree course provides the basic cognitive tools indispensable for the continuous updating of knowledge, also with tools that make use of new communication and information technologies. The graduate is able to apply the developed learning methods and tools to update and deepen the studied contents, also in professional contexts and to undertake further studies.</p>
<b>Spezifisches Bildungsziel und erwartete Lernergebnisse (zusätzliche Informationen)</b>	<p>Knowledge and understanding of the functioning of the agricultural systems and their interactions with the environment. Knowledge and understanding of fundamentals from classical and molecular genetics and biotechnological plant breeding approaches.</p> <p>Applying Knowledge: Understanding through the analysis of environmental and management variables involved in agricultural production process and through the assessment of the agronomical solutions most suitable to the environmental situations. Applying knowledge and understanding by developing practical laboratory skills and the ability to draw information out of practical laboratory activities in support/integration to the theoretical lessons.</p> <p>Making judgments: To be able to judge the level of sustainability of agronomical techniques and the suitable genetic material for a given crop in a given environment.</p> <p>Communication skills: Ability to present and discuss the acquired knowledge using a scientific terminology and sound arguments.</p> <p>Learning skills: Ability to extend autonomously the knowledge acquired during the course by critically reading of scientific literature.</p>
<b>Art der Prüfung</b>	<p>The course examination for the module Agricultural Ecology and Principles of Plant Production is conducted on the basis of an oral test. The course examination for the module Plant Genetics is</p>

	<p>conducted on the basis of a written test (weight = 70% ) and of outcomes of lab. exercises (30%). The final mark will be the average of the marks obtained from both modules.</p> <p>For both modules the assessemnt will test the knowledge acquired, its understanding and its application and transfer to applied cases.</p>
<b>Bewertungskriterien</b>	<p>Awarding a single final grade.</p> <p>Criteria for awarding the grade: the clarity of the answer, the appropriate use of the terminology, the ability to summarise, the argumentative pertinence, the autonomy of judgement and the ability to re-elaborate are assessed.</p>
<b>Pfichtliteratur</b>	<p>Copy of the slides presented by the lecturers.</p>
<b>Weiterführende Literatur</b>	<p>Book: Principles of Agronomy for Sustainable Agriculture. F. Villalobos e E. Fereres (Ed.). Springer 2016.</p>
<b>Weitere Informationen</b>	
<b>Ziele für nachhaltige Entwicklung (SDGs)</b>	<p>Keine Armut, Kein Hunger, Leben an Land, Nachhaltiger Konsum und Produktion, Maßnahmen zum Klimaschutz, Hochwertige Bildung</p>
