

# Syllabus

## *Descrizione corso*

Titolo insegnamento	Smart Grids
Codice insegnamento	45550
Titolo aggiuntivo	
Settore Scientifico-Disciplinare	IIND-08/B
Lingua	Inglese
Corso di Studio	Corso di laurea magistrale in Ingegneria energetica
Altri Corsi di Studio (mutuati)	
Docenti	dr. Vincenzo Trovato, Vincenzo.Trovato@unibz.it <a href="https://www.unibz.it/en/faculties/engineering/academic-staff/person/46153">https://www.unibz.it/en/faculties/engineering/academic-staff/person/46153</a>
Assistente	
Semestre	Secondo semestre
Anno/i di corso	Opt.
CFU	6
Ore didattica frontale	60
Ore di laboratorio	0
Ore di studio individuale	90
Ore di ricevimento previste	
Sintesi contenuti	<p>The course and develops mainly the subjects of the operation and regulation of the national grid high voltage.</p> <p>After outlining the international framework of regulatory boards (CEN, CENELEC, ETSI, IEC, UCTE, etc ...), it introduces the equations of three-phase lines with the propagation constant and the characteristic impedance.</p> <p>It will explain then technological innovation on electric transmission and distribution, as well as the control system in real time. It will be explained the mechanisms to control voltage and frequency according to the request of reactive and active power. It will also</p>

	expose the criteria for the protection of the transmission lines and moreover the problem of power quality and the characteristics of the free market.
<b>Argomenti dell'insegnamento</b>	<p>The course will cover the following topics:</p> <ol style="list-style-type: none"> <li>1. Energy situation</li> <li>2. Electrical circuit representation of transmission networks</li> <li>3. Sinusoidal transmission lines</li> <li>4. Management of networks and interconnection</li> <li>5. Voltage control</li> <li>6. Frequency control</li> <li>7. Stability of the network</li> <li>8. Overvoltage of internal origin and protection networks</li> <li>9. Power quality</li> <li>10. Free market energy</li> </ol>
<b>Parole chiave</b>	Smart grids; Stability of the network; Free market energy; Transmission networks
<b>Prerequisiti</b>	Students attending this course should already be familiar with the topics dealt in previous bachelor's and master's degree level courses, such as Physics II, Electrotechnics and Electrical Systems Engineering.
<b>Insegnamenti propedeutici</b>	The Smart Grids Course is strictly related to the Electrical Systems Engineering course.
<b>Modalità di insegnamento</b>	Frontal lectures and seminars.
<b>Obbligo di frequenza</b>	Not mandatory but recommended.
<b>Obiettivi formativi specifici e risultati di apprendimento attesi</b>	<p>At the end of the course, students will have the following skills:</p> <ol style="list-style-type: none"> <li>1. Knowledge and understanding: Understand the operation and design MV and HV AC power supply lines;</li> <li>2. Applying knowledge and understanding: Being able to participate in the management of an electrical transmission network for controlling the frequency and voltage of the network;</li> <li>3. Making judgements: Knowing how to judge, identify and resolve anomalies and failure conditions of the electricity transmission grids;</li> <li>4. Communication skills: Interact with other operators and technicians to operate in the free</li> </ol>

	<p>energy market;</p> <p>5. Ability to learn:</p> <p>Learn and develop new high voltage line protection systems.</p>
<b>Obiettivi formativi specifici e risultati di apprendimento attesi (ulteriori info.)</b>	
<b>Modalità di esame</b>	<p>The evaluation of students' training will take place with an oral test as summative assessment, during which the degree of learning (ILO 1) and the ability to manage a transmission network (ILOs 2 and 3) will be assessed, together with their communication skills (ILO 4).</p>
<b>Criteri di valutazione</b>	<p>The preparation of the students will be assessed based on the degree of:</p> <ul style="list-style-type: none"> <li>• technical preparation of the topics covered;</li> <li>• learning of the operating and management methods of the electricity distribution and transmission networks;</li> <li>• ability to evaluate fault conditions and recovery methods.</li> </ul>
<b>Bibliografia obbligatoria</b>	<p>PowerPoint presentations will be available in the course reserve collection database.</p>
<b>Bibliografia facoltativa</b>	<ul style="list-style-type: none"> <li>• M. Fauri, F. Gnesotto, G. Marchesi, A. Maschio, Lezioni di Elettrotecnica (vol. 2 Applicazioni Elettriche), Esculapio Editore, Bologna, 2002</li> <li>• L. Fellin, R. Benato, Impianti elettrici, Utet Scienze Tecniche</li> <li>• A. Paolucci, Trasmissione dell'energia elettrica, Padova</li> <li>• F. M. Gatta, Impianti elettrici, Esculapio Editore, Bologna, 2018</li> </ul> <p>Additional material will be provided by the Professor.</p>
<b>Altre informazioni</b>	<p>The Smart Grids Course is strictly related to the Electrical Systems Engineering course.</p> <p>The training of students allows them to find professional applications in:</p> <ul style="list-style-type: none"> <li>• public and private companies that manage electricity distribution and transmission networks.</li> <li>• industries that produce electrical equipment for medium voltage</li> </ul>

	and high voltage. <ul style="list-style-type: none"><li>• engineering companies for consulting and design in the field of electrical energy power plants</li></ul>
<b>Obiettivi di Sviluppo Sostenibile (SDGs)</b>	Energia rinnovabile e accessibile, Città e comunità sostenibili, Innovazione e infrastrutture
