

Syllabus

Descrizione corso

Titolo insegnamento	Forest ecophysiology and soil ecology
Codice insegnamento	47070
Titolo aggiuntivo	
Settore Scientifico- Disciplinare	
Lingua	Inglese
Corso di Studio	Corso di laurea magistrale in Gestione sostenibile dell'ambiente montano
Altri Corsi di Studio (mutuati)	
Docenti	prof. Luigimaria Vittorio Borruso, luigimaria.borruso@unibz.it https://www.unibz.it/en/faculties/agricultural-environmental-food- sciences/academic-staff/person/30124 prof. Roberto Tognetti, Roberto.Tognetti@unibz.it https://www.unibz.it/en/faculties/agricultural-environmental-food- sciences/academic-staff/person/47243
Assistente	
Semestre	Primo semestre
Anno/i di corso	1
CFU	6
Ore didattica frontale	36
Ore di laboratorio	24
Ore di studio individuale	90
Ore di ricevimento previste	18
Sintesi contenuti	 Introduction to soil ecology Soil quality and soil health Climate change Soil biodiversity Soil formation

	 Biological, chemical, and physical properties of soils Rhizosphere ecology Mycorrhizal symbioses in relation to plant nutrition Permafrost ecosystems Plant microclimate Leaf energy balance and evaporation
	 Plant water relations Xylem architecture and water transport Stomata and gas exchange Root structure and nutrient acquisition Environmental factors and tree growth Stable isotope discrimination.
	- Climate change and atmospheric pollution
Argomenti dell'insegnamento	 Describe, measure, and quantify the key processes involved in photosynthesis and analyse how they respond to varying environmental conditions. Describe the mechanisms driving water movement in plants and explain the environmental conditions that influence water transport. Describe the major processes involved in nutrient uptake and discuss the various forms of nutrients utilized by plants. Describe and classify soil processes and profiles, and understand the interactions between biological, chemical, and physical characteristics Describe and quantify soil micro-diversity and understand the role of soil fauna in the context of soil health. Describe and use modern techniques for monitoring soil diversity evaluating species-species interactions through in the rhizosphere.
Parole chiave	Soil quality, Environmental changes, Gas exchange, Soil biodiversity, Water relations
Prerequisiti	
Insegnamenti propedeutici	No
Modalità di insegnamento	Lectures shall introduce fundamental concepts in soil ecology and tree physiology, with particular emphasis on the scientific foundations of climate change adaptation. Field excursions shall provide direct experience in observing and understanding forest ecophysiological and soil processes.

	Laboratory exercises shall enable students to apply theoretical
	concepts through the analysis of empirical data.
	Supporting materials, including PowerPoint presentations, shall be
	made available on Teams.
Obbligo di frequenza	No
Obiettivi formativi specifici e	Knowledge and understanding>
risultati di apprendimento	- collaborate with other professionals in the fields of architecture,
attesi	engineering and natural sciences
	Ability to apply knowledge and understanding>
	Knowledge and learning abilities are achieved through course
	attendance, practical activities both in the field and in the
	laboratory and through personal study. The achievement of the
	learning objectives will be tested through oral and/or written
	examinations, as well as through the guided preparation of
	seminars on topics specific to the Master's degree.
	The tests (written and oral examinations, reports) and exercises
	involve the performance of specific tasks in which the student
	demonstrates mastery of tools, methodologies and critical
	autonomy.
	Autonomy of judgement>
	Autonomy of judgement is developed by means of training aimed
	at stimulating students' critical analysis. This includes the use of
	case studies, simulations using spreadsheets and videos, the
	critical reading and discussion of scientific articles, as well as
	specialised seminars conducted by experts from the forestry and
	environmental sector.
	The assessment of the autonomy of judgement acquired by the
	students is entrusted to the individual lecturers responsible for the
	training activities, who will assess it through oral and/or written
	reports on specific topics and/or through the examination.
	Communication skills>
	Graduates will be able to work professionally and scientifically in
	one or more foreign languages, since in addition to English (the
	official language of the course) in which all compulsory and part of
	the optional courses are offered, they will be able to follow optional
	courses offered in Italian or German. The Language Centre of the

Free University of Bozen/Bolzano also offers students, in accordance with the policy for trilingualism that characterises the profile of the Free University of Bozen/Bolzano, the possibility of taking extracurricular courses at level (A1-C1) in Italian and German.

Finally, the graduate will be able to effectively communicate what he or she has learnt to the different professional categories with which he or she works and has the ability, given the international nature of the degree course, to share projects with foreign interlocutors.

Written and oral communication skills are developed in seminars, tutorials and training activities, which also include the preparation of written reports and documents and the oral presentation of these, compulsorily in English and possibly in Italian and German for optional courses.

The acquisition and assessment/verification of the achievement of communication skills is also envisaged through the writing of the final dissertation and its discussion in English. The Master's degree course promotes the acquisition of additional language skills (Italian/German), which are also aimed at increasing the ability of graduates to effectively market themselves on the labour market in part of the Alpine region (Austria-Switzerland-Italy-Germany).

Learning capacity -->

The graduate will have the ability to learn by synthesising the notions learnt in the course of studies, in order to address complex design issues, by expanding and updating the knowledge and technical skills acquired by using analysis, design and management tools appropriate to the situations in which the graduate operates. The graduate will be able to manage the different information networks in order to be able to continue to learn and thus to update himself/herself for his/her own cultural improvement and professional advancement. In addition, the graduate will be able to identify the appropriate training tools and paths for the development of their own cultural and specialist knowledge. Learning skills are attained during all phases of the course of study. The Master's degree course enables students to consolidate their self-study skills, especially when they carry out group work on proposed topics; again, this ability is enhanced during a compulsory course, which involves group work, and subsequently

Obiettivi formativi specifici e	in the preparation of the final thesis of an experimental nature. In particular, this practical course requires students to work in small groups (3-5) on a project (e.g., rural development plan for a mountainous area, rehabilitation project for a degraded terrestrial or river ecosystem) from its initial stages (identification of objectives, conceptual development of actions, collection of available data) through to interaction with the various stakeholders and communication activities towards society. The projects will take place under the supervision of two or more professors from the two universities involved, but also by having the students interact with professional firms and/or public technical offices that have already expressed interest and willingness to do so. Learning ability is assessed through continuous forms of verification during the training activities and during the conduct of the activity related to the final examination.
risultati di apprendimento attesi (ulteriori info.)	
Modalità di esame	The final grade shall be determined on the basis of course activities, including field exercises and written essays, and shall be complemented by a final oral examination.
Criteri di valutazione	Evaluation shall focus on the student's capacity to undertake research activities both independently and in collaboration with peers. The final assessment shall place particular emphasis on the ability to synthesize, critically evaluate, and establish connections among the topics addressed in the course.
Bibliografia obbligatoria	Recent scientific literature shall be provided throughout the course to support lectures, field activities, and group exercises.
Bibliografia facoltativa	Landsberg J.J., Sands P.J. (2011). Physiological ecology of forest production. Academic Press. Jones H.G. (2013). Plants and microclimate. Cambridge University
Altre informazioni	Press.
	Utilizzo coctanibila dalla torra. Lotta contro il cambiamento
Obiettivi di Sviluppo Sostenibile (SDGs)	Utilizzo sostenibile della terra, Lotta contro il cambiamento climatico

Modulo del corso

Titolo della parte costituente del corso	Soil ecology
Codice insegnamento	47070A
Settore Scientifico- Disciplinare	AGR/13
Lingua	Inglese
Docenti	prof. Luigimaria Vittorio Borruso, luigimaria.borruso@unibz.it https://www.unibz.it/en/faculties/agricultural-environmental-food- sciences/academic-staff/person/30124
Assistente	
Semestre	Primo semestre
CFU	3
Docente responsabile	
Ore didattica frontale	18
Ore di laboratorio	12
Ore di studio individuale	45
Ore di ricevimento previste	9
Sintesi contenuti	 Introduction to soil ecology Soil formation and classification Biological, chemical, and physical aspects of soil Soil micro-diversity and soil fauna Methods to study the past climate and soil Biodiversity Next-generation biomonitoring of soil biodiversity Biological soil crusts Rhizosphere ecology Permafrost ecosystems
