

Syllabus

Kursbeschreibung

Titel der Lehrveranstaltung	Design with Composite Materials
Code der Lehrveranstaltung	47564
Zusätzlicher Titel der Lehrveranstaltung	
Wissenschaftlich-disziplinärer Bereich	IIND-03/C
Sprache	Englisch
Studiengang	Master in Industrie- und Maschineningenieurwesen
Andere Studiengänge (gem. Lehrveranstaltung)	
Dozenten/Dozentinnen	Dr. Ing. Karl Peter Leibenguth, KarlPeter.Leibenguth@unibz.it https://www.unibz.it/en/faculties/engineering/academic-staff/person/47569
Wissensch. Mitarbeiter/Mitarbeiterin	
Semester	Erstes Semester
Studienjahr/e	2
KP	5
Vorlesungsstunden	28
Laboratoriumsstunden	18
Stunden für individuelles Studium	79
Vorgesehene Sprechzeiten	
Inhaltsangabe	Achieving an understanding of composite materials as an important technical means beyond structural applications; to be able to select material combinations based on the external load acting on the object; to get acquainted with different approaches to composite material design with an additional perspective on nature and biological inspired approaches; to gain knowledge on how to characterize composite materials and to assess their failure in

	operation to derive design optimizations.
Themen der Lehrveranstaltung	1. General introduction to composites and their history 2. Materials in composite technology 3. Technical applications going beyond the structural use 4. Production and processing technologies 5. Interfaces and surfaces 6. Behaviour of composites: lab v. operational conditions 7. Design and construction a. Classical toolsets b. Biomimetics and nature-inspired approaches c. Optimization technologies d. Material selection strategies 8. Joining technologies 9. Destructive and non-destructive characterization 10. Failure assessments and their impact on design 11. Recycling and sustainability considerations.
Stichwörter	
Empfohlene Voraussetzungen	Basic material science, construction and production technologies, experimental physics.
Propädeutische Lehrveranstaltungen	
Unterrichtsform	Lecture and exercise.
Anwesenheitspflicht	Not mandatory but strongly recommended.
Spezifische Bildungsziele und erwartete Lernergebnisse	Learning outcomes (ILO): 1. Knowledge and understanding: Students should know the theoretical background of diverse composite materials from materials, processing, calculation, and design perspective 2. Applying Knowledge and understanding: Students should be able to discern the different properties and production methods of the basic material classes from those of composite materials. They should be able to select and use basic calculation methods to determine composite behaviour from data of the constituent materials. 3. Making judgments: Students should be able to critically decide when to employ

	composite materials in component/product design, how to experimentally assess their properties and how to use failure cases analyses as a means to improve designs. 4. Communication skills: Students should be able to present results of the exercises and contributions to discussions/own talks in appropriate technical/scientific language. 5. Learning skills Students should be able to autonomously search and critically appraise technically relevant data, publications and case studies.
Spezifisches Bildungsziel und erwartete Lernergebnisse (zusätzliche Informationen)	
Art der Prüfung	- Formative assessment: In-class exercises: 9x120 minutes; ILOs assessed: 1, 2, 3, 4, 5. - Summative assessment: 100% written exam: 2 hours; ILOs assessed: 1, 2, 3, 4.
Bewertungskriterien	Performance in written exam.
