

# Syllabus

## *Course Description*

<b>Course Title</b>	Design with Composite Materials
<b>Course Code</b>	47564
<b>Course Title Additional</b>	
<b>Scientific-Disciplinary Sector</b>	IIND-03/C
<b>Language</b>	English
<b>Degree Course</b>	Master in Industrial Mechanical Engineering
<b>Other Degree Courses (Loaned)</b>	
<b>Lecturers</b>	Dr. Ing. Karl Peter Leibenguth, KarlPeter.Leibenguth@unibz.it <a href="https://www.unibz.it/en/faculties/engineering/academic-staff/person/47569">https://www.unibz.it/en/faculties/engineering/academic-staff/person/47569</a>
<b>Teaching Assistant</b>	
<b>Semester</b>	First semester
<b>Course Year/s</b>	2
<b>CP</b>	5
<b>Teaching Hours</b>	28
<b>Lab Hours</b>	18
<b>Individual Study Hours</b>	79
<b>Planned Office Hours</b>	
<b>Contents Summary</b>	Achieving an understanding of composite materials as an important technical means beyond structural applications; to be able to select material combinations based on the external load acting on the object; to get acquainted with different approaches to composite material design with an additional perspective on nature and biological inspired approaches; to gain knowledge on how to characterize composite materials and to assess their failure in operation to derive design optimizations.
<b>Course Topics</b>	<ol style="list-style-type: none"><li>1. General introduction to composites and their history</li><li>2. Materials in composite technology</li></ol>

	<ol style="list-style-type: none"> <li>3. Technical applications going beyond the structural use</li> <li>4. Production and processing technologies</li> <li>5. Interfaces and surfaces</li> <li>6. Behaviour of composites: lab v. operational conditions</li> <li>7. Design and construction             <ol style="list-style-type: none"> <li>a. Classical toolsets</li> <li>b. Biomimetics and nature-inspired approaches</li> <li>c. Optimization technologies</li> <li>d. Material selection strategies</li> </ol> </li> <li>8. Joining technologies</li> <li>9. Destructive and non-destructive characterization</li> <li>10. Failure assessments and their impact on design</li> <li>11. Recycling and sustainability considerations.</li> </ol>
<b>Keywords</b>	
<b>Recommended Prerequisites</b>	Basic material science, construction and production technologies, experimental physics.
<b>Propaedeutic Courses</b>	
<b>Teaching Format</b>	Lecture and exercise.
<b>Mandatory Attendance</b>	Not mandatory but strongly recommended.
<b>Specific Educational Objectives and Learning Outcomes</b>	<p>Learning outcomes (ILO):</p> <ol style="list-style-type: none"> <li>1. Knowledge and understanding: Students should know the theoretical background of diverse composite materials from materials, processing, calculation, and design perspective</li> <li>2. Applying Knowledge and understanding: Students should be able to discern the different properties and production methods of the basic material classes from those of composite materials. They should be able to select and use basic calculation methods to determine composite behaviour from data of the constituent materials.</li> <li>3. Making judgments: Students should be able to critically decide when to employ composite materials in component/product design, how to experimentally assess their properties and how to use failure cases analyses as a means to improve designs.</li> </ol>

	<p><b>4. Communication skills:</b>          Students should be able to present results of the exercises and contributions to discussions/own talks in appropriate technical/scientific language.</p> <p><b>5. Learning skills</b>          Students should be able to autonomously search and critically appraise technically relevant data, publications and case studies.</p>
<b>Specific Educational Objectives and Learning Outcomes (additional info.)</b>	
<b>Assessment</b>	<ul style="list-style-type: none"> <li>- Formative assessment:            In-classe exercises: 9x120 minutes; ILOs assessed: 1, 2, 3, 4, 5.</li> <li>- Summative assessment:            100% written exam: 2 hours; ILOs assessed: 1, 2, 3, 4.</li> </ul>
<b>Evaluation Criteria</b>	Performance in written exam.
<b>Required Readings</b>	<p>T.W. Clyne et al., “An Introduction to Composite Materials”, Cambridge University Press, 3rd ed., 2019, ISBN 978-0-521-86095-6</p> <p>K.K. Chawla, “<i>Composite Materials – Science and Engineering</i>”, Springer, 4th ed., 2019, ISBN 978-3-030-28982-9</p> <p>M.F. Ashby, “<i>Materials Selection in Mechanical Design</i>”, Butterworth-Heinemann, 5th ed., 2017, ISBN 978-0-08-100599-6</p>
<b>Supplementary Readings</b>	<p>J. Rösler et al., “<i>Mechanisches Verhalten der Werkstoffe</i>”, Vieweg+Teubner, 3rd ed., 2008, 978-3-8351-0240-8</p> <p>M.F. Ashby, “<i>Materials and the Environment – Eco-informed Material Choice</i>”, Butterworth-Heinemann, 3rd ed., 2021, ISBN 978-0-12-821521-0</p> <p>C. Mattheck, “<i>Design in Nature – Learning from Trees</i>”, Springer, 1st ed., 1998, ISBN 978-3-642-58747-4</p>
