

# **Syllabus**

## Descrizione corso

Titolo insegnamento	Innovative Food Processing Technologies
Codice insegnamento	44752
Titolo aggiuntivo	
Settore Scientifico-	AGR/15
Disciplinare	
Lingua	Inglese
Corso di Studio	Corso di laurea magistrale in Scienze degli alimenti per
	l'innovazione e l'autenticità
Altri Corsi di Studio	
(mutuati)	
Docenti	prof. Giovanna Ferrentino,
	Giovanna.Ferrentino@unibz.it
	https://www.unibz.it/en/faculties/agricultural-environmental-food-
_	sciences/academic-staff/person/36045
Assistente	
Semestre	Primo semestre
Anno/i di corso	2nd
CFU	6
Ore didattica frontale	36
Ore di laboratorio	24
Ore di studio individuale	90
Ore di ricevimento previste	18
Sintesi contenuti	The course aims to provide knowledge and understanding of the
	basic principles, effects and main applications of the innovative
	technologies in the field of food industry. Moreover, the course will
	provide information on the qualitative aspects and stability of food
	products obtained using the innovative technologies.
	The followed approach is both descriptive and quantitative. The
	description of the physical, chemical and / or biological changes
	induced to the food during a treatment is intended to assess the
	impact that the process has on the quality of the final products.

	The quantitative approach provides the tools for choosing the innovative process that tends to minimize the deleterious effects on food. For some of the proposed innovative processes, laboratory activities are planned with the aim of showing the plants and the effects on the treated food.
Argomenti dell'insegnamento	Fundamentals     Definitions and objectives of innovative technologies in food processing
	- Application of mass and energy balances to food processes
	Extraction and Recovery     Innovative technologies for the extraction of food components
	Stabilization and Preservation     Innovative technologies for the pasteurization of food products
	4. Drying and Dehydration - Innovative technologies for the drying of food products
Parole chiave	Innovative technologies; Food quality; Sustainable processes
Prerequisiti	Knowledge in mathematic and physic.
Insegnamenti propedeutici	None
Modalità di insegnamento	The course combines frontal lectures with laboratory sessions.  During lectures, theoretical aspects are presented and reinforced through exercises and practical examples. Teaching is supported by advanced methodologies, including case studies, and by the use of up-to-date tools such as PowerPoint slides, scientific publications, articles from the food sector, and multimedia resources (e.g., videos).
	Laboratory activities are designed to provide hands-on experience, allowing students to apply and consolidate the knowledge acquired during lectures through practical demonstrations and experiments.
Obbligo di frequenza	No
Obiettivi formativi specifici e	Knowledge and understanding:
risultati di apprendimento	Deep understanding of the technological, microbiological,
•	

These knowledge areas will be developed through an educational program that integrates theoretical teaching activities with practical activities, such as laboratory exercises, computer simulations, simulations of food processes using pilot plants, and company visits.

Ability to apply knowledge and understanding:

Ability to manage the technological, microbiological, biochemical, chemical, and physical processes that drive food transformation and the main issues related to the stability and shelf life of food products.

Ability to plan and develop analytical techniques, innovative products, and processes using a multidisciplinary approach, with particular attention to local food productions.

#### Making judgements:

Independent judgement is developed through a training programme designed to stimulate critical analysis in students. This includes the use of case studies, simulations using spreadsheets and videos, the reading and critical discussion of scientific articles, as well as specialist seminars held by experts in the food sector. The assessment of the independent judgement acquired by students is entrusted to the individual teachers responsible for the training activities, who will assess it through oral and/or written reports on specific topics and/or through exams.

#### Communication skills:

Use of the English language, both written and spoken, at a B2 level, with a command of technical and scientific vocabulary related to food science.

Structure and draft scientific and technical documentation describing project activities.

Interact and collaborate in the design and development of products and processes with peers and industry experts.

### Learning skills:

The degree course provides graduates with the cognitive skills, logical tools and familiarity with new information technologies necessary to ensure continuous updating of knowledge, both in their specific professional field and in the field of scientific

	research.
Obiettivi formativi specifici e risultati di apprendimento attesi (ulteriori info.)	None.
Modalità di esame	Written exam consisting of multiple-choice and open-ended questions.
	Oral exam including a PowerPoint presentation.
	Laboratory reports submitted at the end of each activity will also be evaluated.
Criteri di valutazione	Successful completion of the examination will result in a grade ranging from 18 to 30 with honors. Assessment will be based on the following criteria:
	Clarity of presentation and accuracy of answers during both written and oral examinations.
	Mastery of language, with particular attention to the teaching language used.
	Ability to summarize effectively and present information in a coherent manner.
	Capacity to evaluate and establish connections between different topics covered in the course.
	Demonstrated critical thinking and reflective analysis.
	Quality of laboratory reports, including completeness, scientific rigor, and clarity of presentation
Bibliografia obbligatoria	<ul> <li>Slides, keynotes and scientific papers provided by the lecturers</li> <li>Emerging Technologies for Food Processing. Edited by:Da-Wen Sun</li> <li>Supercritical Fluid Extraction: Principles and Practice. Edited by: Mark A. McHugh, Val J. Krukonis</li> <li>Innovative Food Processing Technologies. Edited by: Kai Knoerzer and Kasiviswanathan Muthukumarappan</li> </ul>

Bibliografia facoltativa	None.
Altre informazioni	None.
Obiettivi di Sviluppo	Innovazione e infrastrutture
Sostenibile (SDGs)
