Specific Educational Objectives and Learning Outcomes	Knowledge and understanding have acquired their own project methodology in the field of product design, from the phase of planning to the phase of realisation of the project. have acquired the basic practical and theoretical knowledge necessary to realise a project in the field of product design. have acquired the basic knowledge to be able to turn a critical eye to their own work and to deal with contemporary complexity. have acquired the basic knowledge necessary for further Master's studies in all components of project culture as well as in theoretical subjects.
	Applying knowledge and understanding plan, develop and realise a project in the field of product design. be able to finalize the creation of an accomplished project in the field of product design, thanks to the basic knowledge acquired in the practical, scientific and theoretical fields. recognise the main phenomena of contemporary society, to observe them critically, also from an ethical and social point of view, and to elaborate appropriate solutions at the level of a design proposal/response. make use of the skills acquired during the course of study in the event of continuing studies in a Master's degree programme in the field of product design and to develop them further.
	Making judgements be able to make independent judgements for the purpose of developing their own design skills and in relation to all those decisions that are necessary to bring a project to completion. be able to make independent judgements, both in the critical evaluation of their own work and in their ability to use the right interpretative tools in those design contexts in which they will work and/or continue their studies, also considering ethical and social aspects.
	Communication skills present an independently realised project in the field of product design in the form of an installation, orally as well as in writing in a professional manner.

	to professionally communicate and substantiate one's own
	decisions and justify them from a formal and theoretical point of
	view.
	communicate and present your own project at a professional level
	in another language and correctly in a third language in addition to
	their own language
	Learning skills
	have learned a work methodology at a professional level - in the
	sense of being able to identify, develop and realise solutions to
	complex problems by applying the knowledge acquired in the
	practical and theoretical fields - in order to start a professional
	activity and/or continue their studies with a master's degree
	program.
	have developed a creative attitude and learned how to enhance it and develop it according to their own inclinations.
	have acquired basic knowledge in theoretical and practical subjects
	as well as a study methodology suitable for continuing studies with
	a master's degree program.
