Stunden für individuelles Studium	-
Vorgesehene Sprechzeiten	18
Inhaltsangabe	 This course provides fundamental knowledge of Business-to-Business (B2B) marketing, including customer types and product/service characteristics. It covers organizational buying behavior, customer relationship management, and the strategic importance of relationship marketing. Students will learn to manage and promote B2B products and services, focusing on brand building, positioning, and innovation. The module also teaches essential personal selling techniques, including trust-building, needs discovery, and sales presentation

	planning in B2B markets.

Anwesenheitspflicht	Recommended, but not required.
Spezifische Bildungsziele	Knowledge and understanding:
und erwartete	The student acquires specific knowledge of the economic and
Lernergebnisse	business domains of his/her interest and necessary to address
	decision-making and management issues in public and private
	organisations with an interdisciplinary perspective. In the Data
	Analytics for Economics pathway, knowledge will be oriented
	towards economic theory, economic analysis and econometrics
	through the development of micro- and macroeconomics, decision
	theory under conditions of uncertainty, time series analysis and
	forecasting techniques, methods for causal inference from both
	administrative and experimental data. Knowledge will also be
	oriented towards data analysis. In the Business Analytics track, the
	knowledge acquired will concern the tools necessary for analysing
	and interpreting business and organisational data, as well as business economic measurements, business models and their
	evolution, tools and techniques to support decision-making,
	performance measurement systems consistent with digitisation and
	sustainability processes, the governance of marketing processes,
	with particular regard to digital and interactive marketing and the
	impact of digitisation on marketing activities.
	Aapplying knowledge and understanding:
	Ability to analyse business issues that characterise data-driven
	decision support through the application of statistical and
	computational models.
	Ability to use and apply models for market analysis and economic
	policy formulation.

	Master's graduates will have the ability to apply the acquired knowledge to interpret data in order to make directional and operational decisions in an economic-business context. Master graduates will have the ability to apply the acquired knowledge to support processes related to production, management and risk promotion activities and investment choices through the organisation, analysis and interpretation of complex databases.
	Communication skills: Master's graduates will be able to communicate effectively in oral and written form the specialised contents of the individual disciplines, using different registers, depending on the recipients and the communicative and didactic purposes, and to evaluate the formative effects of their communication.
	Learning skills: "MSc graduates should be familiar with the tools of scientific research. They will also be able to make autonomous use of information technologies to carry out bibliographic research and investigations both for their own training and for further education. In addition, through the curricular teaching and the activities related to the preparation of the final thesis, they will be able to acquire the ability - to identify thematic links and to establish relationships between methods of analysis and application contexts; - to frame a new problem in a systematic manner and to implement appropriate analysis solutions; - to formulate general statistical-econometric models from the phenomena studied.
