## *Kursbeschreibung*

<b>Titel der Lehrveranstaltung</b>	Innovation Management
<b>Code der Lehrveranstaltung</b>	25563
<b>Zusätzlicher Titel der Lehrveranstaltung</b>	
<b>Wissenschaftlich-disziplinärer Bereich</b>	SECS-P/08
<b>Sprache</b>	Englisch
<b>Studiengang</b>	Master in Unternehmensführung und Innovation
<b>Andere Studiengänge (gem. Lehrveranstaltung)</b>	
<b>Dozenten/Dozentinnen</b>	Prof. Alessandro Narduzzo, Alessandro.Narduzzo@unibz.it <a href="https://www.unibz.it/en/faculties/economics-management/academic-staff/person/5125">https://www.unibz.it/en/faculties/economics-management/academic-staff/person/5125</a>
<b>Wissensch. Mitarbeiter/Mitarbeiterin</b>	
<b>Semester</b>	Zweites Semester
<b>Studienjahr/e</b>	1
<b>KP</b>	5
<b>Vorlesungsstunden</b>	30
<b>Laboratoriumsstunden</b>	-
<b>Stunden für individuelles Studium</b>	-
<b>Vorgesehene Sprechzeiten</b>	15
<b>Inhaltsangabe</b>	<p>The course prepares students to analyze problems and make informed decisions related to innovation and its management. Students learn models, tools, and methods to manage innovation within organizations. In particular, the course covers the following topics:</p> <ul style="list-style-type: none"> <li>- Managing innovation in a systemic perspective</li> <li>- Sources of innovation</li> </ul>

	<ul style="list-style-type: none"> <li>– Types of innovation</li> <li>– Patterns and models of innovation</li> <li>– Technological cycles</li> <li>– Managing innovation in Open Systems</li> <li>– Managing exaptative innovation and technological speciation</li> <li>– Innovation management tools</li> <li>– Innovation management metrix</li> <li>- Building innovative organizations: experimentation and psychological safety</li> <li>– Ambidexterity.</li> </ul>
<b>Themen der Lehrveranstaltung</b>	<p>0. Course presentation</p> <p>Learning goals, approach, teaching format, learning materials and how they are selected to be consistent with the nature of the course.</p> <p>1. Innovation, innovative firms, innovation management – An introduction.</p> <p>Why does innovation matter? How do practitioners and scholars think about innovation?</p> <p>Why and how do organizations want to manage the innovation journey?</p> <p>This first session introduces the framework adopted in this course to approach innovation and select the topics.</p> <p>2. Innovation management: problems, myths, traps.</p> <p>This part of the course offers a problematic perspective for framing the management of innovation, both as a phenomenon and as a domain of expertise; any further theorizing can be reconnected to this foundation.</p> <p>3. Innovation: models and conceptualizations.</p> <p>In this section, we review and discuss well-known definitions, conceptualizations, and models. Concepts and models provide complementary perspectives to understand innovation phenomena through multiple lenses.</p> <p>4. Managing innovation in open systems.</p> <p>To innovate, firms often need to draw from various outside sources of knowledge. At the same time, they also need to be focused on capturing returns to their innovative ideas. This gives rise to a paradox of openness - the creation of innovations often requires openness, and the commercialization of innovations requires appropriability.</p> <p>5. Managing innovation as exaptation.</p>

	<p>Innovation management through an evolutionary perspective. Innovation management consists of managing a system of interdependent and evolving components. Innovation as exaptation will be discussed.</p> <p>6. Innovation management: techniques and tools. We review a repertoire of tools traditionally adopted by firms to manage innovation. We discuss to what extent they cope with the problems introduced in Class 3. In particular, we wish to focus on those tools that deal with complexity and uncertainty.</p> <p>7. Innovation management: innovation measurements. Measuring innovation is a tricky issue. On the one hand, there is a need to assess the impact of innovation; on the other hand, the complexity of the phenomenon suggests avoiding simplistic solutions. The most common measures of innovation look at inputs (e.g. intensity of R&amp;D investment) or outputs (e.g. number of patents). The approach proposed for this class proposes to extend this repertoire by including the assessment of the innovation as a process.</p> <p>8. Building innovative organizations: experimentation. Innovation is conceived as a process of experimentation that is grounded on a trial-and-error logic. Its effectiveness depends on the organization's ability to adopt and adapt to this mindset consistently. Organizational culture may inhibit innovation. Building a psychologically safe environment is regarded as a contextual condition to nurture innovation.</p> <p>9. Building innovative organizations: ambidexterity. Firms may adopt organizational forms that are more suitable to support innovation. Through the concepts of organizational ambidexterity and organizational bricolage, we discuss how firms may combine exploration and exploitation.</p>
<b>Stichwörter</b>	innovation, innovation cycle, uncertainty, experimentation, exaptation, innovation management tools.
<b>Empfohlene Voraussetzungen</b>	
<b>Propädeutische Lehrveranstaltungen</b>	
<b>Unterrichtsform</b>	The course is based on both theoretical lectures and the discussion of case studies and other empirical materials, and it requires the

	active participation of students in class discussions.
<b>Anwesenheitspflicht</b>	
<b>Spezifische Bildungsziele und erwartete Lernergebnisse</b>	<p>Knowledge and understanding</p> <p>The student acquires advanced knowledge and understanding of models for new product development and innovation management within companies.</p> <p>I/we acquire advanced knowledge and understanding of business analysis tools and solutions for the development of innovations and organisational knowledge</p> <p>I/we acquire advanced knowledge and understanding of innovation economics models and systems for regional innovation development</p> <p>The student acquires knowledge of quantitative models for the formulation of forecasts necessary to guide management decisions and to predict the life cycle of a product and a sector</p> <p>Ability to apply knowledge and understanding</p> <p>ability to acquire and select relevant information to frame cases of innovation (product, service, social, managerial organisational), also different from the contexts studied</p> <p>ability to select product development models, suitable to appropriately analyse a specific economic-productive context</p> <p>ability to classify, analyse specific innovations and assess their potential</p> <p>ability to select innovation management and organisational knowledge development models, suitable for a specific economic-social-productive context, such as digital transformation, resilience and sustainability</p> <p>ability to select the tools for innovation management and organisational knowledge development, consistent with the models deemed appropriate</p> <p>ability to propose and implement strategic and operational courses of action to foster the development of innovation by a company</p> <p>ability to assess the potential of an innovation within existing enterprises, with respect to the creation of a new enterprise (e.g. intrapreneurship, open innovation, etc.).</p> <p>Autonomy of judgement</p> <p>Acquire the ability to analyse complex entrepreneurial issues, such</p>

	<p>as the elaboration and evaluation of a business project (business plan) or the development of a new product.</p> <p>Acquire the ability to make predictions, such as analysing the future consequences of entrepreneurial, managerial and operational choices.</p> <p>Autonomy of judgement is developed in the training activities carried out for the preparation of the thesis, as well as in the exercises that accompany the lectures and that involve group discussions and the comparison of individual analyses carried out by students in preparation for the lecture.</p> <p>Communication skills</p> <p>Acquire the ability to describe and communicate in an intercultural context, in a clear and precise manner, problematic situations typical of the management of a new enterprise and the development of innovation, such as, for example, the conditions for the validation of a problem or solution, the prospects and risks associated with a business model or an innovation project. The development of communication competences assumes heterogeneous situations such as, for example, the presence of internal stakeholders (e.g. colleagues, managers, owners), or external stakeholders (e.g. potential investors, suppliers and other business partners) and the ability to sustain an adversarial process. The achievement of these objectives is assessed in the course of the training activities already mentioned, as well as in the discussion of the final thesis.</p> <p>Learning ability</p> <p>Acquire the ability to study independently, to prepare summaries.</p> <p>Acquire the ability to identify thematic connections and to establish relationships between different cases and contexts of analysis</p> <p>Acquire the ability to frame a new problem systematically and to generate appropriate taxonomies.</p> <p>Acquire the ability to develop general models from the phenomena studied.</p>
<b>Spezifisches Bildungsziel und erwartete Lernergebnisse (zusätzliche Informationen)</b>	

Art der Prüfung	<p>Written (closed books) final exam (60 minutes). It consists of open questions to assess both acquired knowledge and analytical competencies. A case will be made available on the Teams platform a few days before the exam. Students are expected to read the case in advance and to bring a paper copy of the case to the exam. Some questions assess the students' ability to use the acquired knowledge to analyze the case.</p>
Bewertungskriterien	<p>The evaluation criteria are the following:</p> <ul style="list-style-type: none"> <li>• Appropriateness of the answer and commanding the contents</li> <li>• Structure and coherence of the answer</li> <li>• Mastering critical analysis</li> </ul>
Pfichtliteratur	<p><b>For each topic, the readings are listed according to the order of reading.</b></p> <p><b><i>Innovation, innovative firms, innovation management – An introduction.</i></b></p> <p><i>Baregheh A., Rowley J., &amp; S.
