<b>Ore di ricevimento previste</b>	18
<b>Sintesi contenuti</b>	<ul style="list-style-type: none"> <li>• This module provides a solid foundation in regional and environmental economics, covering key topics such as location decisions, infrastructure, regional disparities, and environmental policy.</li> <li>• Students learn to apply formal economic models and analyze real-world location and environmental challenges.</li> <li>• The course combines theoretical modeling with practical case studies and policy applications.</li> <li>• The main goal is to develop analytical thinking skills and the ability to formulate evidence-based policy recommendations.</li> </ul>
<b>Argomenti dell'insegnamento</b>	<p>This course provides an applied introduction to modern regional economics. It focuses on the determinants of the attractiveness of a territory and will be divided into two parts. An initial part will deal with classical regional economics, while a second part will deal with environmental economics. The first part will introduce students to the determinants of firms' and people's location decisions as well as on the principles of urban economics. It will look at the role of infrastructures and at place-based policies. The second part will provide for core concepts of environmental economics with special emphasis on policy. To this purpose, the course will start with the economic theory of environmental policy. Based on the theory of externalities, it will analyze instruments for environmental policy from an economic point-of-view. It will then introduce topics of behavioral environmental economics.</p> <p>The course is aimed at understanding how formal models can be used to analyze real-world situations. Theoretical analyses are complemented with empirical evidence, case studies, and discussions of implications for environmental policies.</p>
<b>Modalità di insegnamento</b>	Interactive lectures, case-based discussions, and hands-on exercises.
