Kursbeschreibung

Titel der Lehrveranstaltung	Mathematik für Wirtschaftswissenschaftler TSE
Code der Lehrveranstaltung	30162
Zusätzlicher Titel der Lehrveranstaltung	
Wissenschaftlich-disziplinärer Bereich	STAT-04/A
Sprache	Englisch
Studiengang	Bachelor in Tourismus-, Sport- und Eventmanagement
Andere Studiengänge (gem. Lehrveranstaltung)	
Dozenten/Dozentinnen	Prof. Dr. rer. nat. habil. Andreas Heinrich Hamel, Andreas.Hamel@unibz.it https://www.unibz.it/en/faculties/economics-management/academic-staff/person/33708 Dott. Benjamin Weißing, Benjamin.Weissing@unibz.it https://www.unibz.it/en/faculties/economics-management/academic-staff/person/35796
Wissensch. Mitarbeiter/Mitarbeiterin	
Semester	Alle Semester
Studienjahr/e	1
KP	12
Vorlesungsstunden	72 (36 M1 + 36 M2)
Laboratoriumsstunden	72 EXE
Stunden für individuelles Studium	-
Vorgesehene Sprechzeiten	36 (18 M1 + 18M2)
Inhaltsangabe	The course gives an introduction to Mathematics necessary to understand quantitative models in Economics and Management and is designed to acquire skills for the solution of basic

	<p>mathematical tasks as well as for modeling economic/managerial systems. The students will be provided with the basic mathematical concepts and procedures to follow modern courses in economics, business administration and data analytics.</p> <p>The first module is the first part of an introductory course which covers basics in mathematical language (sets, relations, functions) as well as one-variable calculus. Solution procedures for several standard problems (differentiation, integration, approximation) will be introduced. The course is aimed at generating familiarity with and proficiency in applying these solution procedures.</p> <p>The second module gives an introduction to linear algebra as well as multivariable calculus and optimization. Solution procedures for several standard problems (systems of linear equations, gradients of multi-variable functions, solutions of (constrained) multi-variable optimization problems, probabilities for events) will be introduced. The course is aimed at generating familiarity with and proficiency in applying these solution procedures.</p>
Themen der Lehrveranstaltung	<p>The course Mathematics for Economics M1 provides knowledge about the following topics:</p> <ul style="list-style-type: none"> • Sets, relations, functions and their (economic) applications • Numbers, sequences, series and real functions • Derivatives, rules for differentiation and (economic) applications • Taylor polynomials, Newton's method and basic optimization techniques • Economic applications of derivatives, e.g., market equilibrium, elasticities, profit maximization <p>The course Mathematics for Economics M2 provides knowledge about the following topics:</p> <ul style="list-style-type: none"> • Integrals, rules for integration and applications to consumer/producer surplus • Matrices, matrix calculus and systems of linear equations • Functions of several variables and their differentiation • Optimization techniques with applications to regression analysis • Optimization with constraints, budget constraints and demand functions

	<ul style="list-style-type: none"> Basics in probability theory
Stichwörter	Sets, relations, functions, calculus, linear algebra, integral, optimization, multivariable functions, gradients, Lagrange method, regression, probability
Empfohlene Voraussetzungen	
Propädeutische Lehrveranstaltungen	
Unterrichtsform	Frontal lectures and exercises.
Anwesenheitspflicht	-
Spezifische Bildungsziele und erwartete Lernergebnisse	<p>Knowledge and understanding</p> <p>basic mathematical concepts (sets and operations on sets, relations and their properties, general functions, numbers and elementary equations/inequalities)</p> <p>of functions of a real variable: basic properties, derivatives and their calculation including first-order partial derivatives</p> <p>of optimisation problems for one variable: concepts and optimality conditions, convexity, algorithmic approach.</p> <p>of integrals for functions of one variable: indefinite integrals, definite integrals and areas, integral calculus.</p> <p>of mathematical terminology in English.</p> <p>of basic concepts of linear algebra: matrices and matrix calculus, vectors and their geometric applications, systems of linear equations.</p> <p>of functions with several variables: partial derivatives and gradient, convexity.</p> <p>of optimisation problems for several variables: concepts and optimality conditions, for unconstrained and constrained cases, Lagrange's method.</p> <p>of descriptive statistics and how to summarise data: variables, frequency distributions, measures of central tendency and variability.</p> <p>of the concept of uncertainty and the basic elements of probability theory.</p> <p>of the basic concepts of sample theory.</p> <p>of the basic concepts of inferential statistics: point estimate; confidence interval; hypothesis testing; linear regression.</p> <p>of the relationships between variables and basic concepts in</p>

	<p>hypothesis testing.</p> <p>of statistical terminology</p> <p>of the software available for data analysis in the social sciences.</p> <p>of the basics of linear programming in economics and management.</p> <p>of the basics of the concepts of uncertainty, ambiguity and robustness in the context of data analysis.</p> <p>of the basics of order theory specifically partial and total (linear) order relations.</p> <p>of the implications of non-total order relationships on decision-making models</p> <p>of Excel's 'best practices' and main functions for collecting, processing and visualising data</p> <p>of the mechanisms for creating and using big data, and the implications in the business environment.</p> <p>of the monetary value of personal and corporate data.</p> <p>of the fundamental methods and algorithms for data analysis, as well as machine learning methods.</p> <p>of the concept of data security from a legislative and technical point of view.</p> <p>Ability to apply knowledge and understanding</p> <p>basic concepts useful for taking courses in economics, business and administration</p> <p>economic problems with several variables in a formalised manner; ability to identify (optimal) solutions and to interpret the results on the basis of existing theories.</p> <p>Calculate differentials and integrals of real functions. Ability to solve optimisation problems with one variable.</p> <p>define economic problems in a formalised way; to find (optimal) solutions and interpret results on the basis of existing theories.</p> <p>use mathematical tools for the analysis of static and dynamic models.</p> <p>mathematical problems and models and ideas for solving them.</p> <p>use mathematical tools for the analysis of static and dynamic models with several variables.</p> <p>using matrices to represent data and handling them for transformations and calculations.</p> <p>statistical methods as research tools useful in the social sciences.</p> <p>descriptive and inferential statistics to synthesise information, to</p>
--	--

	<p>analyse and interpret relationships between variables and for hypothesis testing.</p> <p>at least one statistical application to develop a simple data analysis.</p> <p>the use of algorithms/applications to find solutions to linear programmes and their dual problems.</p> <p>solving zero-sum games via linear programming</p> <p>solving linear programmes for business management problems: cost and revenue optimisation, logistics design and optimisation, warehouse flow planning, etc.</p> <p>using mathematical methods to model risks (uncertainties) and to solve expected utility maximisation problems.</p> <p>distinguishing between decision situations with complete and non-complete preferences and then using the appropriate model.</p> <p>use of Excel for data collection, processing and visualisation.</p> <p>use of web services for online data analysis.</p> <p>understanding the basic principles of modern data analysis concepts, e.g. machine learning.</p> <p>dealing with data security issues in business realities.</p> <p>Autonomy of judgement</p> <p>identify the most relevant variables to be used when making decisions in complex situations;</p> <p>find the necessary additional information in databases, regulatory sources and scientific bibliography;</p> <p>adopt logical arguments and relate information and analytical tools to find solutions.</p> <p>Communication skills</p> <p>Achievement of this objective will be assessed by means of written examinations, individual and group assignments and the final dissertation.</p> <p>Learning skills</p> <p>ability to find the information required to keep abreast of changes in the service sector in general and in the tourism, sports and events sector in particular</p> <p>ability to find and make use of information from databases, research studies, laws, regulations and standards that are applied in professional life;</p>
--	--

	<p>ability to analyse, critically evaluate and integrate data, information and experience;</p> <p>ability to develop possible solutions for economic and management problems in the operational contexts of reference to the graduates' occupational outlets.</p>
Spezifisches Bildungsziel und erwartete Lernergebnisse (zusätzliche Informationen)	<p>M1 Knowledge and understanding of</p> <ul style="list-style-type: none"> - basic mathematical concepts: sets and set operations, relations and their properties, general functions, numbers and elementary equations/inequalities. - functions one real variable: basic properties, derivatives and their calculus including 1st & 2nd order derivatives. - single-variable optimization problems: optimality notions and conditions, convexity, algorithmic approach. - integrals for single-variable functions: indefinite integrals, definite integrals and area, integral calculus. <p>M2 Knowledge and understanding of</p> <ul style="list-style-type: none"> - basic concepts in linear algebra: matrices and matrix calculus, vectors and their geometrical applications, systems of linear equations. - functions of several variables: partial derivatives and gradients, Hesse matrix, convexity. - optimization problems for several variables: optimality concepts and conditions for the unconstrained as well as the constrained case, Lagrangian method. <p>M1/M2 Applying knowledge and understanding to</p> <ul style="list-style-type: none"> - follow modern courses in economics, business and administration, - establish and analyze mathematical problems and models in Economics and Management, - define economic problems in a formalized mathematical approach; to find (optimal) solutions and to interpret results, being informed by existing theories. - differentiate and integrate single- and multivariable functions, ability to solve single- and multivariable optimization problems. - use matrices for data representation and how to manage them for transformations and calculus. <p>M1/M2 Making judgements</p> <ul style="list-style-type: none"> - to make informed decisions about the relevance of sets vs.

	<p>relations vs. functions in economic models.</p> <ul style="list-style-type: none"> - to interpret results obtained for single-variable mathematical models for economic systems. - to interpret results obtained for linear mathematical models for economic systems involving matrix structures. - to interpret results obtained for multi-variable mathematical models for economic systems. <p>M1/M2 Communications skills</p> <ul style="list-style-type: none"> - to master the mathematical vocabulary and formalism in English. - to communicate ideas, problems and solutions for mathematical models involving single-variable real functions. - to understand matrix formalism and ability to communicate ideas, problems and solutions for linear models. - to understand multi-variable economic models and the ability to communicate ideas, problems and solutions for such models. <p>M1/M2 Learning skills for</p> <ul style="list-style-type: none"> - the study of basic mathematical structures in an economic environment. - for the solution of basic mathematical problems related to economical models. - the study of more complex linear and nonlinear mathematical structures in an economic environment. - the solution of more advanced mathematical problems related to economical models.
Art der Prüfung	<p>Written exam of maximal 120min at the end of each module; take home assignments in each module.</p> <p>There is no different assessment method for attending and non-attending students; the assignments will be posted and their solutions can be submitted online.</p>
Bewertungskriterien	<p>Three assignments throughout each module (count 30% toward the final grade) and a final exam (counts 70% toward the final grade). Enrolled students who do not attend the classes still have to hand in the solutions of the assignments and attend the final exam.</p> <p>Results of assignments are only valid for the academic cycle in which these activities have taken place and results of these activities cannot be carried over beyond that time frame.</p>

Pfichtliteratur	Lecture slides made available on OLE.
Weiterführende Literatur	Will be announced in classes.
